NARRATIVE HISTORY OF FLIGHT:

As a student pilot with recent solo endorsement, pilot was practicing takeoff and landing procedures. Prior to the incident, pilot had successfully departed Runway 30, flown the local traffic pattern and landed on Runway 30 without incident. Upon completion of first successful takeoff and landing, pilot taxied once again to Runway 30 for another practice takeoff and landing. Prior to departure, pilot called the local FBO terminal to verify wind conditions. Personnel at the FBO terminal, verified 0 knot crosswinds. Student pilot solo endorsement requires pilot to restrict all flight to a maximum of 5 knots crosswind. Once pilot verified that wind conditions were well within student pilot restrictions, he proceeded with radio call to inform local traffic of his departure from Runway 30. At approximately 0920, pilot departed Runway 30 without incident. Pilot climbed to appropriate traffic pattern altitude. Prior to entering the left downwind leg, pilot called to inform local traffic that he was entering a left downwind for Runway 30. Pilot then entered left downwind without incident. Pilot continued the traffic pattern without incident and entered a left base for Runway 30. Pilot again called local traffic to inform them that he was entering a left base pattern for Runway 30. Pilot successfully completed the base leg without incident. Once pilot entered final approach, he verified with the airspeed indicator that final approach speed was appropriate. Pilot then proceeded to complete final approach without incident. Final flare and touchdown procedures were smooth and without incident. However, upon entering the rollout phase, pilot inadvertently placed his left foot on a portion of the left brake while attempting to apply left rudder only. The aircraft immediately responded to the left braking by beginning an initial slight swerve to the left. Pilot immediately placed right foot on right rudder to regain control of the plane as it entered a slight swerving motion down Runway 30. Continuing to assume that he had his left foot only on the left rudder, pilot then inadvertently applied more brake input to the left brake. Within seconds, the plane entered a sideways slide down Runway 30. The aircraft continued sliding until it departed Runway 30, crossing a grass median and coming to rest on the neighboring taxiway. Once stopped, the pilot immediately shutdown all engine and instrument controls and quickly exited the aircraft. Pilot walked away from the aircraft without injury. Local airport personnel came to assist and noticed a small fuel leak occurring under the right wing. The local fire department were called to apply a fire retardant foam to the fuel spill (approximately 3-4 feet in diameter) to assure no fire hazard could occur.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

PILOT COULD HAVE PREVENTED THE RUNWAY INCURSION
BY NOT INADVERTENTLY APPLYING BRAKE INSTEAD OF
RUDDER DURING THE ROLLOUT PORTION OF LANDING.
