☐ In-Flight ☐ Explosion at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Nosegear steering linkage/strut damage, prop strike, both wingtips damaged, crease in aft fuselage.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On Saturday September 1, 2018 at approximately 11:45 local time I went for a flight with a CFI onboard to practice beach landings. I flew to Katmai Bay beach which had over 4,000' of smooth and relatively level surface suitable for landing. I conducted several low approaches, then drug the tires along the beach testing the surface. The surface was solid and favorable for landing. I flew another lap then landed the aircraft on the area I had just tested and shut down. We got out of the airplane and walked the beach and discussed various aspects of beach landings.

We decided that I would fly several additional landings (solo) as my CFI watched from the beach. We identified and marked a specific touchdown location that I would attempt to hit on my practice landings. At approximately 14:00 local time I took off and flew a lap in the pattern with the intent of landing. On approach I determined that I would overshoot the marked touchdown point and I executed a go around. On the second attempt I touched down and began the roll-out. During the roll-out I relaxed the back pressure on the yoke and the aircraft became nose heavy, which led to a ground-loop.

The plane turned sideways and the right wing dipped and struck the ground. The plane then spun around and the left wing struck the ground as well as the prop. Both wings sustained damage along with the nose gear steering linkage, nose gear suspension strut, the prop, and a crease in the fuselage aft of the baggage door.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

In reviewing the incident with my CFI and looking at the tracks in the sand it was obvious that I failed to hold back pressure on the yoke during the roll-out. This allowed the plane to ride on the nose wheel and set the conditions for the ground loop. Maintaining back pressure on the yoke in a proper soft-field technique would have likely avoided the accident.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No
(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
