☐ In-Flight ☐ Explosion at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

substantial Damage to Airframe, firewall, landing gear and propeller. Wing strut bent.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

I was on final approach in the pattern and had made a mental note to look a little further down the runway than I had been, this changed my focal point and I believe resulted in the bounce. I bounced higher than I realized the bounced two more times. I had a little crosswind correction in as the reported wind on final on the twos reported 110° @ 6 knots. I was landing on 18 and this correction had me veering off centerline to the left. After the third bounce I was settling in and had the stick back to pin the tail down. At this point in the landing I was pretty much at ground roll speed and should have began working the rudder + brakes working back to centerline. It was at this moment I made a bad decision to go around. This decision should have been made at the first bounce. The other reason this was a bad decision is I was heading toward other aircraft on the ramp on the East side of the runway and beyond the aircraft were Hangars. I applied full throttle and did not relieve the back pressure on elevator which resulted in a very high angle of attack resulting in a stall + spin and impact with the ground in the grass.

See additional Page on Back ~

Departure time was around 6:15 from KVBT where I have been training and where the aircraft is based. The plan was to work in the pattern on take-off and landings this was my second solo flight in this aircraft. I had made one take off and landing just before the accident. The accident occurred on my second lap around. The accident was 100% pilot error.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I should have made the go-around decision at the first bounce and should have not tried a new focal point as I had already established a sight picture that was producing good landings. The other best option since I delayed the go-around decision would have been to keep the aircraft straight and work back toward the centerline with brakes + rudder using rudder first then brakes. Applying throttle when veering toward obstacles is in most cases ~~not~~ is not going to be a good option. In this case I was pretty much at ground roll speed and the time for the go-around was past.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
