DAMAGE TO AIRCRAFT AND OTHER PROPERTY

Description of Damage to Aircraft and Other Property <i>(Use additional sheet if necessary)</i> Damage was to aircraft only. Leading edge of left wing sustained impact damage from contact with two 4" spruce trees. Impact occurred near the wing tip and center of leading edge. That impact resulted in apparent damage at one or possibly both fuselage attachment points for the wing. Slight bend in left front strut. Propeller bent, probably from contacting small tree or bush.		
NARRATIVE HISTORY OF FLIGHT <i>(Please type or print in ink)</i>		
Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.		
I checked ATIS and departed Kenai Airport 9/13/2018, at 10:40 a.m. with full fuel. Weather was clear. Crossed Cook Inlet at 4500 feet and flew direct to unimproved strip on the Kustatan River approximately 35 miles west of Kenai. Arrived approximately 11:10 am. Weather clear, wind calm. I had landed at the strip earlier, on 9/9/2018, and determined that it was rough and brushy. I intended to set up a moose hunting camp there, so the purpose of the trip was to clear the strip by removing some young trees and brush that prevented a fuller utilization of the strip and to set up a tent. I had no passengers. My load consisted of a chain saw, chain saw fuel, firearm and misc. camping gear. I set up the landing with a relatively steep descent and full flaps. I landed hard and bounced. The plane angled slightly to the left of center and then continued to pull left on roll-out, caused, I believe by the uneven surface and my failure to provide adequate control inputs to correct the drift. The left wing impacted a small tree causing the aircraft to pivot into an adjacent tree, stopping the aircraft and further damaging the wing. The propeller also received damage. The engine was still running after the aircraft came to rest. I estimate the distance from touchdown to impact to be approximately 300 feet.		

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I should have done a better job of setting up the landing so that I didn't set myself up for a hard landing. A less steep approach and carrying power to landing would have kept the aircraft under better control on the rough surface. Upon bouncing after the landing I should have immediately initiated a go-around. On roll-out, more aggressive braking would likely have stopped the aircraft before reaching the trees and had I applied the right brake more aggressively I may have been able to control the drift to the left, in spite of the rough ground

* The Lycoming O-320 engine referred to above was purchased as a newly overhauled engine from Aero Recip Alaska. I received no records indicating actual date of manufacture so I used the release date of May 3, 2005 as the date of manufacture and the basis date for computing total time.

** The probable reason the ELT failed to activate was the relatively slow speed at which impact occurred and the fact that the impact occurred to the wing.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE
