NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On the morning of September 11, 2018 at about 10:30 AM EDT I was flying N88AG, a Piper PA-34-200 as a Flight Instructor with student Maria Fernanda Contreras Morales.

We started doing Multiengine Commercial maneuvers at around 3500 feet MSL, and then came down to 2000 feet MSL towards KTNT airport to practice an RNAV GPS approach to Runway 9 with a simulated engine failure. We made the procedure turn, and then inbound before the Final Approach Fix I placed the Left Engine Fuel Selector Valve in the OFF position to simulate an engine failure. Ms Contreras went ahead and executed the Engine Failure Procedure as per the proper Emergency Checklist. I got distracted reporting our position on CTAF 123.0 since I heard another aircraft in the area, ahead of us on Final, and forgot to reset the Fuel Selector back to ON position after she simulated feathering the Left Engine, with its throttle back to "Zero Thrust". She continued with the RNAV approach, did the Before Landing Checklist, and at 250 feet, just prior to the MDA I called out "Runway in Sight", at which point she lifted up her View Limiting Device, and proceeded to make a Visual Landing. I noticed that the airspeed was getting below the safe speed Blue Line, and told her to "increase the speed". She then added power on the Right Engine but apparently not pushing enough Rudder Pedal the airplane started to bank to the Left. At that point she called out "I CAN'T I CAN'T", then I immediately took over the Flight Controls, at almost a 45 degree bank, and about 50 feet MSL. I pushed hard on the Right Rudder Pedal, and some Right Aileron to level the wings, she helped me do that, and pushed both Throttles to bring the nose up, the Left Engine had a slight surge but not enough to make the airplane climb, since the Landing Gear was down, and she had set the Flaps at the Full Landing position of 40 degrees. The airplane settled down in a level attitude on this shallow Lagoon between Runway 9, and its parallel taxiway A, and after bouncing several time on the water came to a full Stop on shallow water of about 3 feet.

Ms. Contreras quickly asked if she should shut down everything, and performed the Secure Checklist, to which I agreed and then later she told me that she found the Left Fuel Selector already in the OFF position. Then it dawned on me that was why we could not get enough power to Go Around.

None of us two suffered any injuries. I called our Dispatch in North Perry on my cellular phone, and told them what happened, and they notified the airport attendants since we had no radio because the aircraft battery had separated from its mount on the nose due to the impact.

I usually kept my left hand on the Fuel Selector, and then reset it to ON after the student simulated the Engine Feather but that one time I got distracted, and forgot to do it, and neither the student nor I caught it when she performed the final Before Landing Checklist.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

This accident could have been prevented if I, the instructor had:

- 1) Initially simulated the Engine Failure by simply retarding one of the Throttles to the Idle position, and later adjusted it to the "Zero Thrust" position after the student had performed the proper checklist, and simulated Feathering of the Propeller but never by placing the Fuel Selector OFF at altitudes below 3000 feet AGL.
- 2) Not allowed the student to go to the Full Flap position of 40 degrees before landing with only one engine producing forward thrust in Multi Engine Training.
- 3) Double checked all items on the Before Landing Checklist.
