Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Collapse of right landing gear, prop strike, damage to right wing.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Flight started with zero wind observed and ATIS reporting "CALM WIND".

I took off from runway 34 and left the airport traffic pattern to a near by flight practice area.

After a brief practice of 360 deg turns and stalls at altitude, I returned to the traffic pattern with a 45 deg entry into the downwind pattern. Down wind flight was at 80 knts, base was 70 knts, final was 60 knts. I selected to use 40 deg of flaps for landing.

I began to round out the short final. I decided to use an additional power input (~1100rpm) to prolong and slow the flair for minimum bounce on landing. I made a three point landing and incurred a small 'gallop' of occilations in the roll out. The aircraft began a slow turn to the left between bounces so I began applying right rudder to correct. After three 'gallops' I applied some 'up' elevator to supress the occilations and provide a more positive control of the tailwheel. Immediatly the left wing rose while the right landing gear remained on the ground. The wing lifted enough to allow the airplane to yaw to the left and be positioned in a direct skid of the landing gear down the near middle of the runway.

The plane continued straight for a short distance, then started turning to the left and began loading the right landing gear with weight. The right landing gear seperated from the aircraft causing the right wing to contact the ground. The aircraft skidded to a complete stop a short distance later. The observed winds several minutes later were a moderate and variable cross wind to the runway.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Observe/obtain wind information prior to entry into traffic pattern.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No
