Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Left wing tip pushed up. Right wing tip leading edge had dent/crushed. top deck bar bent up and out cracking sky light. prop made contact with ground causing small dent, no curls. motor was at idle when prop hit. Air intake pulled away from cowling.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

We were coming into land with a nice slow full flaps approach. Slight intermittent wind at 5 MPH. I landed in the same general area 2 weeks ago with no problems. Conditions changed with the amount of rain in the last two weeks. The moss was now very slippery and broke away Fairly easy. We had a smooth landing and was on the roll out (25-30 ft) and hit a few holes/bumps in the landing area, the plane rocked side to side, the left wing made contact with the ground and pushed up. Causing the right wing to come in contact with the ground and catching/impacting the ground. This caused the aircraft to go into a ground loop. The plane spun 180 degs and came to a rest. During the loop the tail came up causing the nose to go down and the prop came in contact with the ground.
