Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Main rotor blades destroyed, tail rotor blades damaged, skin on tail boom wrinkled and torn, broken upper and lower bubble, tail rotor gearbox detached from tail boom held on A/C by 1 inch drive shaft, 5 inch drive shaft torn in half, aft engine mounts broken, engine lower snubbers broken, dual carburetor Y broken off of intake manifold, wrinkled skin in aft cabin section. On the seed tender, bent the top auger and the auger hit the seed box, breaking the top half and lid for the box

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Sept20,2018 1230ZuluTime

Sky was clear, no mechanical issues with the helicopter. Took off of transport trailer to have ground crew hook the seeding bucket to the cargo hook to do a 30 minute seeding job, came to a hover above the bucket that was on another trailer while the ground crew was hooking up the bucket to the cargo hook. After coming to a hover the helicopter unexpectedly began to settle when the main rotor blades came in contact with the auger on the seed tender. Several days later I was talking to the ground crew and one of the guys admitted he had taken a hold of the skid gear before the main blades came in contact with the auger on the seed tender. The helicopter landed on the round bales that were in front of the trailer the seeding bucket was on. The terrain was flat and grass with round bales of hay to the west side of the trailer and a north south tree row about 75 feet to the east of the trailer. The trailer that transports the bucket also has the weigh hopper on it to weigh the dry material so we get consistent loads.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

A change in training of the ground crew and their understanding of how their actions can change the way the aircrafts controllability is effected.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)
