Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

damage is, Windshild, Antanna, Wing rib damage requiring repair and several replacements and recover. Rudder is bent but fixable. nos e bowl cowlng is dented but fixable. Its really not that bad. propellor was damaged but is repairable.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

It was a nice fun day to fly on a saturday. My buddy in his carbon cub and me in N1698k departed U42 to head south toward a possible meet up with some other flying friends for lunch. No plan really just enjoying sport aviation. As we went south we flew over the water of Utah Lake and were making several landings on the beach area. At Pelican Point we had landed and were taking off several times. Wind was from the south but the shore line right there is more northwest to southeast as opposed to the rest of the beach being north and south. I was operating landing and taking off on the beach on an angle to diminish the crosswind that was from the south. I had taken off and landed several times but the last Take off didn't go well.

I was taking off from the waterline aimed to the center of the point where the bushes were and taking off. I was aimed as much into the wind as I could. During take off I was just on the dry beach close to the water and a gust of wind from the right blew me to the left and into the water line I was paralleling at that time. I was slow maybe 20 MPH Airspeed when a huge wing gust hit. I was using full control deflection right rudder and full flaps and full power and full aileron but when I was blown into the water my left gear had more drag on it then the right because it was in deeper water and with the accermentric drag and the cross wind it just kept turning left into deeper water and I was hoping it would get on top of the water but it wouldn't My airspeed was never over 20-25 mph and I chopped the power as I felt it flipping over. I was hoping to keep it upright but it flipped over the nose and onto the back it ended up 90 degrees left from that take off direction. I was also thinking it was going to flip I was hoping it would flip before I got into deeper water. It ended up in 12-15 inches of fresh but fish smelly water. As I chopped the power I regretted not having a shoulder harness and I put my right arm up to protect my face. As I went over my buddy was on the radio asking me if I was OK. I remember taking a deep breath before I went over just incase I needed to swim.. But it wasn't deep at all. I turned off the master switch and turned off the fuel and braced myself as I released the belt and slid out the right side door onto the wing. My buddy was on the shore as I got out. After a few minutes of chit chat and making sure I was OK he left to get a recovery team started. My phone was last in the water So I couldn't call anyone. I figured it was just a little incident like a ground loop. But people came to the scene, Highway patrol and Sheriff and EMS.. But I was fine just embarrassed that after 30 years of flying I had finally bent something. I was really pissed at myself but the damage is really not that bad. Damage is really limited to 2 wing struts and several wing ribs that will need to be replaced and a bend on the top of the rudder a windshield and some prop repair. It's not a lot of damage because it landed on soft water at a slow speed. After several hours my buddies and I had the wings off and it was all back on my hangar in time for dinner. Not the Best Saturday but not the worst. Darn Cross Winds.
