Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

All damage was confined to the outboard-most part of the left wing. The fiberglass of the left wing tip sustained minor scrapes penetrating the gel coats. The outboard section of the left aileron was slightly bent upwards, and the spade on this aileron was likewise bent about 20 degrees. Based on external examination, several ribs on the section of the wing outboard of the pitot tube were slightly bent. Details of internal damage to the wing await opening the fabric of the wing for repairs. Following the accident all control surfaces still moved through their entire range of motion with no obstruction or binding.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

My flights on September 18, 2018, began at Sheridan, Wyoming from KSHR. I departed there about 9:40 MDT after waiting for ceilings to lift and precipitation to move through the area to the SE. About 2.3 hours later I landed at KHSR, Hot Springs, SD, for fuel and a weather check. My aircraft is equipped with ADS-B in and out, so I am able to access FIS-B weather information in flight when I have reception from ground stations. At KHSR I was able to access internet weather through the Foreflight application on my iPad mini. The very extensive and detailed information available from this source allowed me to plan a VFR route to KGRI that avoided low ceilings and precipitation. I departed KHSR at approximately 13:00 local time and proceeded southeast towards Alliance, NB, because this would keep me in VFR conditions. From Alliance, I turned east towards Grand Island, where I arrived about 3.5 hours at approximately 17:30 CDT. Throughout both flights this day I encountered winds and turbulence that required constant attention to maintain course and altitude.

As I neared Grand Island I listened to the ATIS, which said the wind was out of 080 at 10 knots. That was considerably better than the METAR in effect at the time, so when I contacted the tower and was assigned runway 35 I continued on my path into the pattern for 35. On short final to 35 I judged the wind speed to be somewhat higher than 10 knots and gusting a bit, but still just within the available rudder travel to counteract, so I continued with the landing. I touched down straight a couple of feet to the left of the mid-line and rolled out straight and got the tail down. At some point after that I lost directional control and entered the ground loop into the wind from the right, dragging the left wing tip. I do not know if wind gusts played any role in the loss of control. I was not injured and the aircraft righted itself. There was no propeller strike, no damage to the landing gear, and no damage to the empennage. I then taxied to the FBO.

The METARs for KGRI flanking this accident were:

182253Z 10012G22KT 10SM CLR 29/19 A2987

182353Z 10011KT 10SM CLR 25/19 A2989

These suggest that I may also have encountered a quartering tailwind component at the time of my landing, though that was not obvious from the wind sock at the approach end of runway 35, or from the control feel.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I believe this accident was primarily the result of fatigue. I should have requested runway 13, which would have reduced the crosswind component to a more manageable level, rather than accept runway 35 as assigned by the tower controller. The conditions on landing on runway 35 were within the capabilities of the aircraft and my skills under normal circumstances. I think fatigue dulled my judgment, as well as reduced my reaction time in dealing with a landing close to the edge of what the aircraft can do.
