Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

A sign (off of the runway, a lighted taxiway sign) broke away on impact. The sign punched a hole on the aircraft behind the left cowl and tore the skin in multiple places under the fuselage to the tail.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Flight originated at Gillespie Field Airport (KSEE). Flight destination was Sacramento Executive Airport (KSAC). Porterville Airport (KPTV) was the planned fuel stop. From Palmdale (PMD) I was on a course direct to runway 30. Approximately 20 miles out I listened to AWOS, began a descent to pattern altitude (1450'). I made at least 3 CTAF radio announcements. Hearing no other radio calls prior to a 3 mile final, I continued straight in at 80 kts. I completed the pre landing checklist. The flaps were incrementally increased to full. The final approach and descent to touchdown was normal. Touchdown target was just beyond the numbers. Crossing the threshold I reduced throttle to idle, flared about 3 ft above runway, airspeed slowed to 60 kts. There was a float for about 100 ft. The landing was soft with a straight roll out of about 400 ft. when the direction of travel became about a 10 degree angle to the right of the centerline. In another 100 - 200 ft, the aircraft accelerated suddenly then veered sharply right off the runway. My attempts to continue straight or stop did not change the path of travel. Leaving the runway, the veering aircraft hit a lighted taxiway sign and continued to travel at the accelerated rate out of the infield, crossing the taxiway at an angle. The aircraft entered the second infield on the other side of the taxiway. The aircraft continued almost onto the parallel taxiway before coming to a stop. At my request, during approach until touchdown, my passenger verbalized windsock indications to be fluctuating in direction and speed. My passenger called out the wind is from the ten o'clock, the eleven o'clock, ten o'clock, nine o'clock positions with about 6 kts. to no wind. At touchdown the windsock indicated no wind. After the plane was moved by hand from the infield to the tie down area I saw "dust devils" or swirling winds close to the runway. Later my passenger also witnessed "dust devils" in the area of the airport to the west of the runway. My passenger reported a burst of wind, strong enough to push him up and slightly back while facing the approach end of the runway. He encountered this wind burst during inspection of the tire marks on the runway after the incident.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Operator has no definitive recommendation. Possibly a radio call to unicom might have provided more weather history details. Perhaps a flyover the runway and a 45 entry to downwind could have provided more wind awareness.

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

I have a suggestion for minimizing aircraft damage. The taxiway sign has a rectangular sheet metal frame with sharp edges and right angle corners. Some other construction might be less destructive such as plastic frame and or rounded corners. The sharp corners sliced opened the skin of the fuselage in multiple places after the cowling and before the tail like being opened by a can opener.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE
