Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

AIRPORT TAXIWAY SIGN DESTROYED.

AIRCRAFT STARBOARD WING BOTTOM SKIN PANEL TORN OPEN BETWEEN AT RIVET LINE BETWEEN LEADING EDGE AND RIGHT MAIN LANDING GEAR. FUSELAGE NEAR WING ROOT DENTED FROM IMPACT WITH SIGN.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I performed a standard walk-around, engine start, taxi, and run-up of N400JW at Santa Monica Municipal (KSMO). I took off from KSMO runway 21 at 15:43 local. After exiting the SMO Class D airspace, I requested VFR flight following services from Socal Departure while I performed maneuvers over the Malibu area.

After entering VNY Class D airspace from the southwest via the Malibu area, VNY TWR directed me to enter a standard right downwind, then cleared to land 16R, number 2 following a light jet (I do not recall the type of jet). Shortly after this light jet landed, VNY TWR amended my clearance and issued an immediate base turn, cleared to land on adjacent 16L due to incoming Citation traffic for 16R. I made the short approach as requested, expediting my descent and turning base. The rest of the approach and final were uneventful. During flare, I felt a gust from the right side so I applied a correcting left rudder and lowered the right wing slightly to compensate for this xwind. The nosewheel touched down before I could return the rudder (and therefore nosegear) to neutral and the aircraft began to veer to the left. At that moment, I decided against applying sharp right rudder/steering, as I felt I would not know if differential braking would cause the aircraft to spin out to the right side of runway 16L which would interfere with the landing Citation on 16R. Therefore I put in minimal right steering and braking.

The aircraft then continued to skid off the left side of runway 16L, crossed an exit taxiway at a 45 degree angle, hit a taxiway sign and went onto the adjoining taxiway B. Upon returning to pavement (taxiway B) I immediately put the aircraft onto the taxiway centerline, and applied full braking until the aircraft came to a stop.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

As PIC, even though I had landed many times before at KVMY, I always had the option to (a) decline the short approach/runway switch to 16L, and (b) perform a late go-around after the crosswind affected the aircraft. By declining the short approach and runway switch, I may not have been negatively impacted by the crosswind/possible wake turbulence from the first arriving jet. It would also have provided extra time to perform a standard descent from traffic pattern altitude.

My situational awareness could also have been improved if during the landing clearance ATC had reminded me via "caution wake turbulence" terminology. I was acutely aware of the incoming Citation as I recall hearing the separation warning horn in the background of the ATC landing clearance/runway switch call, and became more focused on that (likely minimal factor) traffic rather than the jet that had just landed on the adjacent runway.
