NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The flight departed from the Royal Wolf lodge, (59.02N/ 155.59W) at 5PM for a 5:30 pick up at the lower end of Moraine creek (55.19N/155.15W). The weather was clear with scattered clouds at 3000. The landing area was over flown and it was noted that the river was low and there were sand bars in the river. The landing was made up stream and the plane kept on step until arriving at the pick up point on a left hand bend of the river. This has been a normal pick up point in the past when the creek was at a higher level. The take off from the river was down stream and required a slight right turn then a left turn on step to the straight section of river for take off. The wind was light and variable out of the SE. Take off power was applied and while still in a plow a slight right turn was made then a turn to the left at this time the floats contacted a sand bar in shallow water preventing the continuation of the turn causing the aircraft to collide into the river right bank. The aircraft stopped on top of the bank and all occupants departed the aircraft through the aircraft doors. A company plane landed 15 minutes later to take the passengers back to the Lodge.

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

The water depths in this river change through out the year and as the water depth becomes less the amount of useable river for take off and landing becomes less. Where you can take off one day may become un useable for take off the next. Look at all options for your takeoff and make sure you limit the exposure you have to making a mistake.
