Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Classis Tailwheel Ground Loop due to downwind, downhill landing. Damage would have been minor except the airplane decided to make it's 90 degree turn right at the lowest point on the runway that just also happens to be where the short perpendicular taxiway to the ramp is.

Still not an issue, except the short perpendicular taxiway has two, 2' drainage ditches on either side of it. Consequently once my airplane turned 90 degrees at this juncture. While traveling appx. 5 -10 MPH my right wheel slide off the short perpendicular taxiway, down a slight gravel ramp into the 2' drainage ditch. Being at that Right Wing Down attitude caused my Right wing tip and horizontal stabilizer to contact the ditch bottom and bend the right wing tip (about 2' up) and aileron, right horizontal stabilizer and elevator and right landing gear. It also tweaked the fuselage. Luckily the propeller didn't touch a thing but air!

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

I completed my BFR in my birddog on 4/15/18 and began flying at regular intervals in late July and August. As matter of fact, between 7/30 and 9/5/18 I had accumulated 10 hours of PIC time with 58 Take Offs and Landings, all to full stops!

Regardless, on September 5th, 2018 I departed Modesto (CA) Airport (KMOD) at appx. 0800 to pick up my friend and fellow pilot Richard Braner at Oakdale Airport (027) to get some experience landing at 3 airports in the foothills East of Modesto.

After picking up Richard I flew East to Calaveras Airport (CPU) listened to the AWOS, observed the Wind sock (calm) and landed on runway 31. Taxied back and departed for Columbia Airport (022).

Nearing 022 I again listened to the AWOS, observed the wind sock and landed on runway 17, also the active runway at that time. I then taxied back and departed for Pine Mountain Lake Airport (E45).

As I approached E45 albeit VFR, there was enough smoke hanging in the valleys to make visibility less than prefect but certainly manageable. E 45 has no AWOS so as I approached the field I was scanning for the wind sock to determine which runway to use. After making my initial CTAF radio call as to my position and intentions I noticed a low winged airplane departing runway 27. Assuming (incorrectly) that this was the Up Wind runway I proceeded to radio my intentions to land on runway 27. After completing my "On Final" radio call and being set up for 27 with the proper flap deployment and approach speed I touched down (3 point) on the centerline, just past the numbers.

All was well until suddenly my left wing raised up abruptly. I corrected with left aileron and the airplane veered to the left. I applied full right rudder to regain directional control but to no avail. The aircraft keep turning sharply to the left and I went from Pilot in Command to Passenger (aka, along for the ride).

The Airplane completed its ground Loop maneuver right at the low point in the runway which is also the first taxiway to the left going to the ramp. Unfortunately for me and my Airplane, that is also the low spot in the median between the runway and the ramp where a small drainage pipe is routed. That makes the median area at that point 18" to 24" lower than the runway. Consequently, my right landing gear slid down the gravel around the drainage pipe, pitching my right wing even further downward allowing it to strike the ground resulting in a bent wing and damaged airplane.

The propeller/engine was spared damage as it never struck the ground or any airport signage etc.

After the less than stellar landing concluded I asked Richard if he was ok to which replied "Yes, I'm fine". I pulled back the mixture which stopped the engine and we exited the plane.

At this point the airplane was clear of the runway as well as the taxiway.

It didn't take very long before a group of local pilots showed up to lend a hand. We pulled the airplane from the depressed area with a tow bar and one of the individuals allowed me to store it in his hangar until I could get in touch with a repair facility to begin the process of returning my "Classic Birddog" to its original condition.

Since I've been flying for 23 years without an event, I'm a novice in the Bent Airplane reporting arena and didn't realize this needed to be reported to the NTSB due to the "level of damage".

The Airplane was transported by Beegles Aircraft Service to their repair facility in Greely CO. where repairs are scheduled to commence in January of 2019.

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

In retrospect I believe what happened was I landed with a left quartering tailwind and most likely got hit by a slight burst of wind as I passed the wind blocking hill directly to the left of the touch down area when using runway 27. Since this unfortunate event I have had numerous conversations with long time tailwheel pilots and they all agree that a downwind landing in a tailwheeled airplane is always a bad thing and if it's downwind and downhill the likelihood of a straight forward landing is minimal at best!

Looking forward I can assure you this pilot will never take for granted the wind direction based on landing or departing traffic or transmitted via AWOS, ATIS or Tower personnel. I will always make sure I have checked the Windsock prior to landing.

In addition, I am traveling to Heber City Utah on 11/25/18 to acquire Advanced Tailwheel training and techniques for 5 days from Barry Hancock, Owner of Pilot Makers Advanced Flight Academy. The main purpose is to hone cross wind and (if the need arose) downwind landing techniques to abate any future landing mishaps like the aforementioned "Very Costly Mistake"....

This training was completed on 11/26 through 11/28/2018 with Barry Hancock at Pilot Makers Advanced Flight Academy with 4.7 hours of advanced training in a Super Decathlon with 42 take-offs and landings.
