

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Frankston State: TX

ZIP: 75763 Country: USA

Latitude: N32°4.90' Longitude: W95°27.15'

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 10/02/2018 Local Time: 10:15am
mm/dd/yyyy

Time Zone: CDT

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N20179

Manufacturer: Airborne Windsports

Model: Edge XT912-B Weight Shift Control

Serial Number: 113

Year of Manufacture: 2006

Amateur-Built: ☐ Yes ☐ No If Yes: ☐ Kit/Plans ☐ Original Design Make: _____

- ☐ IFR-Equipped and Certified
☐ Commercial Space Flight
☐ Unmanned Aircraft

Maximum Gross Weight: 992 lbs

Weight at Time of Accident/Incident: 715 lbs

Number of Seats: 2 Flight Crew Seats: 1

Cabin Crew Seats: _____ Passenger Seats: 1

Number of Engines: 1

Category of Aircraft

- ☒ Airplane
☐ Balloon
☐ Blimp/Dirigible
☐ Glider
☐ Gyroplane

 ☐ Unknown

Aircraft Fire

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Explosion at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Wing and prop heavily damaged, carriage (fuselage) minor damage. No other property damage.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departed T25 approximately 9:15am CDT for a local flight. After takeoff from RNWY-27 made left turn and departed the traffic pattern to the south. Climbed to 1200' MSL and made LH and RH 360 degree turns, descended to 500' AGL and made some low approaches to a grass pasture, climbed back to 1200' MSL and repeated the low approaches from left, right, and straight in. Did climbing full power turns and power off descents before returning to T25 for landing. Once back at T25 I flew the pattern and made a low pass down the runway, then made a LH traffic pattern to RNWY-27 for a full stop landing. My touch down point was about 20% down the runway and close to centerline. The touch down was smooth, at about 35kts but slightly crooked (WSC aircraft have no rudder) The front steering jerked a bit from side to side, began making a rumbling noise, which became louder and the front wheel dug into the sod runway, causing the aircraft to roll onto the right side, My estimate is that the aircraft slid about 50 feet after rolling over on the right side. The wing hit the ground and absorbed most of the energy. The aircraft remained near the center of the runway with the nose still pointed in the direction of landing. I remained in the carriage, with the seat belt still fastened. I was also wearing a helmet, that stayed on my head. My upper body was on the ground and trapped under the wing tubes and control bar. Friends were able to lift the wing off of me so I could climb out of the carriage. The wing was heavily damaged, but stayed attached to the rest of the airframe. The broken wing parts, cables, and ground contact broke the composite propeller blades (pusher configuration). The engine which had been running at idle speed had already stopped before I switched off the mags. The safety pin was replaced in the ballistic parachute, and the aircraft was lifted upright onto the wheels. A golf cart was used to pull it back to my hangar. All parts and crash debris remained within about 50' of the aircraft.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Having more recent flight experience, especially in WSC, would likely have been beneficial. I think that my response in making steering inputs was a bit slow, and possibly in the wrong directions initially. It should be noted that the steering on WSC trikes is backwards compared to other GA aircraft. i.e. it takes a push with the right foot in a trike to make it turn left. All of the other controls are backwards as well, but the steering is particularly difficult to master.

After not flying for awhile, it would be a good idea to do some landings on a big runway instead of using a crowned 60' wide sod runway with big trees on both sides.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

The cast aluminum front wheel rim broke and the tire came off shortly after the landing touch down. I can't say for sure what the sequence of events was that led up to the wheel failure. The only thing for sure is that the front wheel dug into the sod runway and scooped out a nice divot of sand and grass. The front wheel is listed in the Airborne XT912 parts catalog as "Gremica Front Wheel Assembly P/N 105781"

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

The aircraft involved in this report is a WSC trike. The provided check boxes on the forms do not include WSC.

It should be noted that WSC aircraft always land with the rear wheels touching down first. It isn't possible to land with the nose wheel touching down first, i.e. no porpoise opportunities. However, the front wheels are subject to significant side loads while turning due to the heavy wing being mounted so high. Also, the only brake is on the front wheel, subjecting it to braking and turning loads at the same time.

Having thought about it for a few days, I believe that the basic design of the trike combined with my rusty piloting technique caused the front wheel to fail and that caused the accident.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE**Date of this Report**10/06/2018*mm/dd/yyyy***Name of Pilot/Operator:** William M Barton, Jr.**Signature:** _____
