NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On Friday, October 5, 2018 at approximately 2310Z I took off from runway 18 at KTOP (Topeka Billard) in CH2000 Alarus N642AM. This was my first solo flight in this aircraft make and model. (I successfully completed the insurance check ride with a CFI three days prior to that.) On the day of the incident, I was the only person on board of the aircraft.

After two touch-and-go landings at KTOP, I got cleared by the Billard tower for departure to the east. I flew to KLWC (Lawrence Municipal) and made a full stop landing there. After having both fuel tanks topped off, I departed back for KTOP. I arrived back into the KTOP airspace at approximately 0100Z, after the civil twilight, and it was getting dark. The Billard tower was already closed. I reported my arrival on the tower frequency (118.7) 9 miles and 4 miles out, then on left downwind, base, and final to RW18. Weather conditions were VFR. Topeka weather services reported wind direction 170 at 4 knots. No other traffic was present.

Pre-landing and landing checks were performed according to the check list. The approach was smooth and uneventful. The runway lights were manually set to medium intensity. I used partial flaps on the base leg and fully extended flaps on the final leg. I crossed the runway threshold at 70 KAIS, reduced power to idle and started the flare, at which moment the aircraft abruptly sank. I tried to correct that by adding power but perhaps wasn't assertive or quick enough. The contact of the main gear with the runway was harder than I expected, making the aircraft bounce quite high up in the air in a nose-high and slightly to the left attitude. As the aircraft started to drift off the runway center, my only option was to go around. With that in mind, I immediately applied full power, but probably due to the combination of low airspeed with a high pitch attitude caused by the bounce, the aircraft experienced a brief stall - the nose pitched down and to the left of the runway. I attempted to apply the right rudder and level the wings, but did not have enough time to properly recover and ended up impacting the grassy area east of runway 18 and west of runway 13. The aircraft came to a stop facing east. Upon the impact, the nose gear got separated, and the propeller struck the ground.

I got out of the cockpit unharmed, sustaining no injuries. Once on the ground, I surveyed the aircraft damage. There was fuel leaking from both wing tanks, which I was able to reduce to a drip by closing the fuel shutoff valve.

After that, I reached the Billard FBO (Kaw Valley Aviation) and reported the incident. The Metropolitan Topeka Airport Authority and the FAA ROC were duly notified. I appreciate the support I received from both agencies.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

It all started with the high sink rate which I did not expect. I was aware of this characteristic of split-wing flaps and tested it as part of my checkout flight on October 2nd, 2018, which seemed to give me better understanding of aircraft characteristics. Still, in hindsight, my engine power reduction in the night conditions needed to be much more gradual.

Upon the initial impact and realizing the need to abort the landing, I should have been more assertive in pushing the nose down.

In summary, the main cause of the incident in my opinion was the reduced depth perception in the night conditions, in combination with my relative unfamiliarity with this aircraft, which prevented me from applying proper correction inputs more assertively.
