Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Nose gear, both engines, some structural, No damage on ground except one runway light.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The purpose of the flight was to familiarize myself with new avionics that brought the plane into compliance with ADSB in and out. I had flown the plane the previous day and had some issues that I wanted to clarify and continue the familiarization flight the next day.

At approximately 11:30 on October 5th the aircraft started takeoff roll on runway 13 right KSAT. Held plane on ground until takeoff speed. Brought control back to start climbout and aircraft pitched up severely. Pushed forward to bring nose down since there was eminent danger of stalling. Nose started down and I immediately pushed back to bring under control. This put me in negative g condition and I discovered the seat belt had disconnected. Since I was unable stabilize my body and was essentially hanging onto the control the airplane continued down until The nose gear came into contact with the runway. It immediately bounced back up and started porposing with me trying to gain control while unstabilized by the seat belt. About the 3rd cycle the airplane's attitude was probably 30 degrees down when it contacted the runway with the engines putting out full power. This caused the nose gear to fail and the airplane struck the runway and started skidding along. Both engines hit the runway and failed. I was able to control the direction of the plane enough to direct it off the runway and onto the onto the grass. This is when I took out one of the taxi lights, which was the only damage to the airport. There was no fire or fuel loss.

Inspection of the plane after removing from the runway and securing it in the hangar determined the vertical trim tap was in the full up position. I had not checked it since I had flown the plan the previous day and landing was normal with minimal up trim. Obviously this was an error on my part. The seat belt seemed to be functionly normally, but it has had an occasional problem in the past with maintaining latching. Normally I pull on it make sure it is secured, but i did not this time. I also did not utilize the shoulder restraint.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Verify secured seat belt. Check trim position prior to takeoff.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
