NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I and my student Clay Goddard departed KPDK about 1530Z in Cessna 172 K N996SB. After doing air work in the practice area, we went to KLZU to practice traffic patterns low approach and landings. Conditions were VFR, runway 7 was in use and the wind was out of 090 at 6 knots. There was light turbulence in the pattern. We were on our 4th approach and configured with full flaps at 70 MPH. Short of the end of the runway, we were too high and Clay pitched down. I saw the pitch was excessive and called for change of controls. However he stayed on the controls, and we were at cross-purposes. I overpowered him, but by this time we were over 45 degrees pitch down. On the pull-out I was able to reach the runway overrun. We hit level, but I was not able to arrest the descent, the nose wheel collapsed and the plane slid on its nose and stopped. Fire immediately broke out in the cockpit by my left leg and I ordered us to abandon the plane. I grabbed the fire extinguisher and tried to extinguish the fire from outside the plane. The fire extinguisher ran out but the fire was not reduced, I was unable to reach in and turn off the fuel selector. Within moments, the cabin was completely engulfed. We retreated to a safe distance and waited for fire rescue.

Lawrenceville airport does not have fire rescue on the field. The emergency vehicles had to come from the fire station in town. By the time they arrived, the wings had melted off and the fire was subsiding. The aircraft was destroyed.

I was wearing shorts and my left leg looked like it had been sunburned, but there were no blisters and by the next day it was normal. I bumped my head on the doorframe, Clay also bumped his head exiting. The EMT personnel checked us over and released us. We went to the tower and gave them our contact information.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Clay's aircraft control was very good for a low time student; he had considerable prior experience using a very good flight simulator. He had always instantly relinquished the controls in the several times I had demanded them.

I have replayed the accident many times; I fail to see what I could have done differently to change the outcome. The altitude was about 75 -100 feet. The response time was very short; we were on the ground in about 5 seconds.

We were extremely fortunate the doors did not jam. There was no time to unlatch the doors, as I would have done in an emergency landing. I should have immediately tried to turn off the fuel selector. This might have slowed the fire if the fuel lines from the tanks were intact.

The accident did not deter Clay in his desire to become a pilot. He has recently soloed and now has over 20 hours.
