Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Hit a pine tree during taxiing after landing which dented leading edge in about 12 inches in from left wing tip and bent rear spar by root of wing.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Weather: Clear and dry. Winds were from southwest less than 10 miles per hour.

VFA checkride for Basin Harbor was on 8/13/17. Most recent before incident was on 6/17 for 2 full stop landing and 7/28/18 for three touch and goes at Basin Harbor.

Took off from Burlington Vermont (around 10 AM) and headed west to Lake Placid for some Fall colors. After about 45 mins around Lake Placid area headed back east to Vermont. I had the plane for a few hours and needed to go to bathroom so I thought I would land at Basin Harbor to use their rest room at the Red Mill restaurant.

On final approach to Basin Harbor I radioed on unicom 122.8 this was for a Full Stop Landing at Basin Harbor grass strip. After landing at Basin Harbor on runway 20 grass strip, I started the back taxiing to get the Red Mill plane parking area. A Piper Tripacer radioed it was on final for runway 20. I saw the plane coming in on final approach so I steered the plane to the left to get out of the center of runway and give the plane room to land since it did not radio it was going to do a go-around. As I was taxiing and focussing on his landing approach for enough room between me and him, I did not see the tree line since it was about 120 degrees from my center line of sight. At first I thought the left brake stuck and caused me to veer to the left into the tall grass at runway edge. However after getting out of the plane and seeing I went about 3 feet into the tall grass at edge of runway at about 45 degree angle. I also then noticed the left tip area of wing had clipped a 10 inch diameter pine tree in from the runway edge. I secured the airplane and called Vermont Flight Academy of situation and their instructions. I'm sorry this accident happened.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

The grass strip runway and area around it is mowed the same length short like a residential lawn. This mowed short grass goes up to the tree line on both sides of the landing strip. The mowed short grass which goes to the tree line really isn't usable for an airplane. Since this airport field only takes in small planes, I suggest a 20 foot rough grass area on each side of usable runway and tree line to be beneficial so the pilot has a visual to stay out of the 2+ foot taller grass buffer for the tree line so not to go closer or you may clip a wing on a tree. Something like a golf course layout fairway/rough areas. Another idea is put in visual ground boundary markers 20 foot from tree line. These markers could be angled in the ground about 3 inches high with yellow and white hash markings,

He should of did a go-around until I was clear of the runway back taxing which is the only way back to airplane parking area. I also should of radioed him and ask that he do a go-around as I was taxing back on the runway and which has no marked taxiways.
