Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Bent left strut, a broken windshield and top of the rudder was bent. Not problem I had built the rudder anyway. Can do it again. After getting everything upright I could see that the left wing had bent the fwd spar. and had multiple broken ribs. I could also see the fuselage had a bent attaching point for the left fwd spar.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On 10/12/18 about 9:00 AM. I took off from Auburn (S50) to go fishing for silvers on a river bar on the Snomish river south of Manroe Wa. About 9:30 Am. I made my approach from the south east down river over a wooded area to avoid any populated areas. I put the plane in a side slip to lose altitude and pulled the nose up to slow and added flaps. At about 8-10 foot over the river I level the wings and lowered the nose with minimal airspeed. During the side slip the engine had died because I had gotten too aggressive with the throttle and pulled it enough to bend the Idle stop screw bracket slightly. Because my engine is so quite and the plane is sound proofed and I have noice consoling head phones I did not noticed until I tried to give it throttle with no results. I did not have time for a restart and settled into the water about 15-20 feet short of shore. The plane was so slow at this point with out power it did not hydroplane at all and flip on its back. It then Hydroplaned on its back onto the Island.

The reason I had started to get too aggressive with the throttle was I had had a lean mixture issue that tended to over heat the engine on take off and cruse on hot days. The carburetor is a Rotec throttle body fuel injection carb from Australia. I had ordered some spray bars and had drilled out 4-5 of 60+ holes one size larger to allow it to run a little richer. That had worked perfectly but I had drilled the first hole right at the location where the engine wanted to Idle. So with that hole closed it would die. With the hole open it Idled slightly high. This was not a problem unless I was trying to land really short. So unknowably I was pulling back a bit too much on the throttle to get the lowest RPMs possible. Well I got them and killed the engine.

After stoping I turned everything off. Including the ELT. I got out and surveyed the damage and at the time did not see major damage except a bent left strut, a broken windshield and top of the rudder was bent. No problem I had built the rudder anyway. Can do it again. I called my buddy and he set out to come help with his plane. He arrived about 45 min. later and by that time I had all the cables, wiring, fuel hoses and nuts off the wings and struts. When he got there we took all of 30 min. getting the wings off and rolling the fuselage back up right. After getting everything upright I could see that the left wing had bent the fwd spar. and had multiple broken ribs. I could also see the fuselage had a bent attaching point for the left fwd spar. We moved everything to high ground. Not much left to do but fly home and get some rope and help. The next morning four of my friends came to help. I drove up with my trailer. We pulled and carried the plane up river about a 1/2 mile. Then up over a 6 ft bank, down a trail to a farm road. The plane was back in the shop the day after the incident. And will be flying by spring.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Big guys should not get aggressive with the throttle. Should have replace the carb spray bar with a newly drill bar much sooner. At the time did not seem to be much of a problem. But thats how it always goes. Should have been pro-active instead of now being re-activer. Thing to do is learn and look harder for the unexpected consequences.

I will replace spray bar and beaf up the Idle screw bracket.
