10/25/2018

Morning started out normally. Had a good night's sleep and was looking forward to my 2nd Solo flight, which included a flight to KMEV from KCXP. I had made similar flights many times with my instructor, Paul Hamilton, and was very enthusiastic about the flight and confident in my abilities in 288SL.

Paul met me at the plane after I had completed my pre-flight. He put in some more fuel and wished me well. Winds were calm, Visibility 10 mi+. Start up was normal, all instruments looked good, and as usual I practiced my rudder controls on Alpha on the way to the run-up area. Everything was functioning normal.

I planned on performing 1 or 2 touch and goes on KCXP 27 before exiting the pattern and heading towards KMEV. Take off was normal and I continued in the pattern planning to land at 27 from a left Base. Flaps were set at position 2 on Final; I kept my speed at 70 KTS until round out. I had a very hard landing at my first try, bouncing quite severely twice before initiating an immediate go around. I stayed in the pattern to attempt a smoother landing on the 2nd try. Turn downwind seemed normal. However, as I approached my intended Base turn, I felt that the pedals were not reacting to my commands. In fact, they were not reacting at all! I immediately applied significant pressure on the right pedal and noticed that the nose yawed a bit to the right, but certainly not in a normal or sufficient fashion. At that point I sensed that I had most likely damaged the nose gear on the first attempt and I announced my intentions to turn base and final in a hurried manner and set the flaps. My focus was getting the airplane onto the runway and I maintained 70 Kts on final approach. I remember that going through my mind was the fact I really had no idea how the plane would react upon touchdown, as I definitely had no control through the pedals. Admittedly I was quite nervous and I do not remember the landing being particularly hard as I attempted to round out at a slower speed. I believe that the rear wheels touched down first and at that point all I remember is that the plane immediately veered to the right when the nose wheel touched. It all happened pretty quickly and I was grateful that the plane did not pitch head over heels. I immediately shut off fuel, fuel pumps, Magnetos and Master, followed by remainder of switches. An airport maintenance crewmember approached after several minutes and helped me exit the cockpit.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

1. Higher Standards and Better Constancy for Landing Approach/Roundout/Flare.
2. Second CFI Cross Check for Student Solo.
