Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

REPAIRABLE IMPACT DAMAGE TO BOTH MAIN ROTOR BLADES.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On 27 October, 2018, at approximately 1245 I took off from KRNO piloting N1032F on a public-use aerial observation mission in support of a Vice Presidential visit. At approximately 1445, I was traveling southbound over I-580 between KRNO and KCXP at 400 feet AGL. The terrain is flat at an elevation of approximately 5,060 ft MSL, and begins to climb to an altitude of approximately 5,165 ft MSL approaching the area where the wires cross the highway. In the area of the wires, there are hills on either side of the highway. At the time of the incident, much of the hillside was in shadow, with the sun coming from an azimuth of 228 degrees at an elevation of 22 degrees above the horizon. The sun was in line with the direction of travel for the aircraft, with the sun in my eyes. Approaching the area of the incident, an unidentified, unauthorized vehicle entered the highway in front of the motorcade, also heading southbound. While approaching the vehicle from behind and to its right, I struck 3 120KV power lines strung across the highway at location N39 12 32.34/W119 48 18.84. The wires crossed the highway from behind one hill to behind an adjacent hill on the other side of the highway. The power line poles were not visible due to being located on the south side of the hills, behind blocking terrain. The wires were unmarked as required by AC 70/7460-1L CHG1, and are not listed on the VFR sectional for the area. My altitude at the time of impact was approximately 200 ft AGL based on my radar altimeter reading. On contact with the wires, I executed an emergency landing in the northbound lane of I-580, landing at N39 12 24.62/W119 47 48.09. Once on the ground, I executed an emergency shutdown and assisted the two passengers in egressing the helicopter. There were no injuries to any of the occupants.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Recommend depicting the wires on the VFR Sectional chart and marking the wires with high visibility marker balls, per AC 70/7460-1L CHG1.
