Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Nose gear collapse with damage to structure and gear mounts.
Main gear bent/twisted aft.
Propeller destroyed
Motor mount damaged (bent, broken welds)
Right wing tip tank (fuel) leaking. Left wing has small puncture near root.
Position/strobe lights broken

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I, Douglas Marshall (pilot) received 1.1 hours of training with a CFI in the Glasair IIS, N505YR on Thursday afternoon (Oct. 25, 2018); making 5 landings in Marshall, TX (KASL). I received an additional training 1.8 hours on Friday morning (Oct. 26), which included steep turns, slow flight, stall recovery, go-around, a crosswind landing and three regular landings. Austin Moses (co-pilot) had received nearly one hour of training with three regular landings on Thursday.

Following the training on Friday morning, we fueled up the airplane and departed for Hereford, TX (KHRX), which took approximately 3.5 hours because of headwinds. Upon landing, we learned from other pilots that our radio was not transmitting despite every indication in the cockpit that it was working correctly. We were receiving radio calls from other pilots. After refueling and a brief rest, we resumed our journey Fort Morgan, CO and avoided airspace requiring radio communications. Headwinds slowed our progress, so we opted to land in Laramie, WY (KLAR) for the night. The leg of the trip from KHRX to KLAR also took approximately 3.5 hours. Austin and I traded off being at the controls on both legs of the flight, but I had about 4 of the 7 hours at the controls.

I had some difficulty sleeping Thursday night and had about 5-6 hours of sleep. I attempted, unsuccessfully, to nap while the co-pilot was at the controls. We approached KLAR at dusk, with clouds on the western horizon partially obscuring the sunset, which further darkened the runways. The co-pilot had been to KLAR on previous long cross country flights, but I had not. Being weary from insufficient rest and nearly 9 hours in the cockpit (including the training that morning), I asked the co-pilot if he felt comfortable landing the airplane from the right seat as I thought it more prudent for a more experienced and rested pilot to be at the controls. He agreed. The co-pilot was at the controls and pilot in command at the time of the accident.

As the cockpit darkened, we attempted to adjust the panel lighting so that the instruments would be more visible. We discovered that after the recent annual inspection and work on panel switches, that the panel lights were not functioning. I retrieved a small flash light from my flight bag to illuminate the instruments.

Having no radio transmitting capability, we could not activate the runway lights at KLAR and entered the pattern without them. Fortunately, another airplane was approaching and activated the lights while we were in the downwind leg. I continued to call out the airspeed to the co-pilot as we turned base and final and until we contacted the runway.

The co-pilot correctly flew over the numbers at 85 mph as trained, cut power, and settled toward the runway. He flared when he thought the runway was close. The airplane was still going 75-80 mph ($\sim 1.3 V_{so}$) when it touched down. We do not recall if the plane "ballooned" on approach, but with first contact between the nose gear and the runway, the plane began "porpoising" with each successive contact being more severe. The co-pilot added power to initiate a go-around, but to no avail. On or about the third or fourth contact with the nose gear, the plane darted into the safety zone to the left of the runway and came to rest about 50 ft to the side of the runway.

Upon ascertaining that we were not injured, we secured the fuel and electrical systems, exited the plane and retrieved debris from the runway and larger pieces of fairings, etc. in the safety zone. After this, we walked to the FBO office, Cowboy Aviation, where we called the police. With the assistance of the airport manager, we contacted the FAA. We estimate the time of the accident to be approximately 6:40 pm MDT. Sunset was at 6:05 pm.
