Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Propeller strike
Left landing gear collapse
Damage to Left wing

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

This flight was a familiarization flight in a newly acquired aircraft. This was the first flight in the aircraft in over one year and the first flight after condition inspection. I had previously owned this aircraft 8 years ago and had 125 hours in this aircraft. Changes had been made to the aircraft since I previously owned it. The tires size had been increased to 7 inch tires and the Maule tailwheel had been replaced with a Matco unit. The control horn had also been increased in length.

I had taken off from runway 22 and flew approximately 9 minutes to familiarize myself with the aircraft. I had performed some steep turns and performed slow flight to check the airspeed indicator prior to landing.

I entered a left-hand traffic pattern for runway 4. I made a three point landing on runway 4 aligned with the runway and with no lateral drift. The touchdown itself was without incident. Immediately on roll out the plane, unexpectedly, pulled strongly to the left. I applied right rudder with no effect. I applied increasing right rudder. The plane turned sharply to the right and ground looped.

The left wing skidded on the runway. The left tire separated from the wheel. The wheel dug into the runway and the left landing gear collapsed. The prop struck the runway and the engine (which was at idle) stopped. The plane came to a stop upright on the runway.

I shut off the master switch, fuel, and ignition and exited the aircraft without injury.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

1. Recent tail wheel landing practice would have been beneficial.
2. High-speed taxi testing to check tracking of the landing gear may have been helpful, but this also carries significant risk.
