NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

I was asked by Mr. Danny, the aircraft owner, to fly his aircraft for routine maintenance to Lufker airport (49N) grass field on Saturday October 20th 2018. I inquired about the status of the aircraft, and he replied that it was nothing serious, just routine maintenance on the landing lights. I insisted on reviewing the aircraft logbook, to check the airworthiness of the aircraft, and also to have maintenance log-in the aircraft. He insisted it wasn't necessary because he wanted the aircraft to be inspected correctly and deeply. He proceeded to show me a paper from the aircraft log with all inspections and effective dates. Upon verification, I proceeded to do my preflight check. After complete, I was able to start the aircraft after several attempts. I left it running to ensure that the engine is reliable. I proceeded to get ATIS and requested flight following from NY CENTER. As I approached the airport vicinity, and with the field in sight, I requested to switch to advisory frequencies. I flew VFR midfield and attempted to land on the windsock favoring runway. I then proceeded to join the right downwind at 1100ft, with the before landing checklist complete, and an indicated airspeed of 90kts with 1 knoch of flap, since I had to execute a short and soft field landing. I was on base at 600ft with 2nd knoch of flap with 75kts, followed by a final airspeed of 60Kts flaps full and 1200 RPM. Everything seemed normal at that point until the flare with power idle, and waiting to touch down. As I continued scanning, expecting a touchdown, I realized I was almost midfield and still floating and an RPM had increased with the throttle idle. I immediately put the flaps to the first setting with a go-around decision in mind. I realized that a go-around would put me in danger due to the power lines and trees ahead. At this point I turned off the fuel pumps, cut the mixture, and maintained throttle idle. The engine did not stop, and the aircraft momentum did not slow down, even with full brakes with an s turn and 180 turn, the aircraft continued to slide on the grass until it hit a wooden pole near the high way, where the aircraft came to an abrupt stop. This caused damaged to the propeller, nose gear and left wing.

I am very familiar with this airport, and believe the accident due to mechanical failure.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

WITH MORE KNOWLEDGE OF THE SITUATION CONCERNING THE ENGINE, THE BEST COURSE OF ACTION WOULD HAVE BEEN A GO AROUND, DECLARED AN EMERGENCY AND LANDED AT KFOK. KFOK HAS BETTER AND LONGER RUNWAYS, AS WELL AS RESCUE EQUIPMENT IF NEEDED. ACCESSING THE ENVIRONMENTAL DANGERS WITH THE POWER LINES AHEAD AND THE AIRCRAFT CLOSE TO MID-RUNWAY, THERE WASN'T ENOUGH ROOM TO EXECUTE A GO-AROUND.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

AT IDLE POSITION, THE AIRCRAFT PRODUCE MORE POWER THAN NORMAL
