Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft hit signage to avoid hitting cars, impact happened with gear up. One sign ripped left gear door off pulling the left gear down and ripping it off, the other gear remained up and locked. Damage to right wing was a lot more than left, right wing tip was ripped off along with damage to control surfaces and flaps along with damage on the right leading edge by the door causing the right fuel tank to rip open. Tail section was 3/4 ripped off aft of the cargo bay (at the rivet line by the cargo bay door) and was still attached to main body on left side. Damage to the pitot tube was minor, the prop was bent as the aircraft was still producing some power ~7mp 200rpm set on high rpm. The aircraft slid on the belly for 360ft until stopping. No other property damage was done.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Terrain-Plains, flat over small town.

Departure-3:15pm TX at KEDC near Austin, TX

Fuel was obtained to top off the tanks

Destination- KCVN (flight time estimated 2hrs 50mins, actual 2hrs 40 mins)

History.

Friday's flight was set to depart at 1:45 New Mexico time @ CVN, the aircraft was unable to start. I ran the strobes for 5 mins the night prior and thought I drained the battery. Start up was 2:20 with the use of the APU. At 2:30 we departed runway 22 the total trip was 2.8 hrs we were running an avg of 12gph @7,500. Wt & Bal was within limits.

Upon arrival at EDC the aircraft was tied down, and locked. Sunday Nov 4th at 1:45 TX time I refueled the aircraft with 33.6 gallons, the plane had 60 gallons of fuel on board. After the refueling. The aircraft would not start I had to run the aircraft off the APU to start. I seen that my radios were frozen and thought that was very odd. I knew it was not required for safe flight and determined the aircraft was safe, I called the tower via cell phone and requested light gun signals for departure and that we would be low until we got outside of the airspace. The tower cleared me to takeoff after a run up. Upon takeoff power was set and gear was selected to come up. Alarms went off and we lost all power. I turned the AV master off, and reselected gear to down and locked. I cycled the AV master on and off to verify the issue. I called the tower to check my gear and verify down and locked and that they weren't in transition or up. We landed safely and hooked up to a battery charger.

I let the plane charge all night as wind was getting bad at CVN and didn't want to risk a flight at night with electric issues. The following morning Nov 5th I took the plane to the shop to verify my battery was good, and replaced it with a brand new battery it was thought that it didn't have an effect. We checked the starter and alt and then the radios from being frozen. I cross checked the Wt & Bal and it was within limits approved by the flight manual. Did another pre flight and seen we were two gallons shy of full and verified had the required fuel and more. Take off was at 3:15 TX time at 6,500. At 4:18 TX I switched from the left main to the right main. I ran the right main until 5:49 TX over Muleshoe, TX at that time I switched to my left main the fullest tank in preparation for landing fuel pump was on. 4 NM south east of the airport I felt a loss of power. I ran thru my loss of power flow check and verifying the fuel was on the LEFT tank and got on glide speed radioing for help. At the time I was too low and prep'd the cabin for a landing. I seen the train would block the traffic, and that was the best chance I had to set it down. I avoided the cars in my path and preventing a stall after the landing I ran thru my checklist of shutting down and fuel cut off while my paxs departed the aircraft to a safe distance.

Please look at the Word. doc if you'd like to see the path.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

No fuel leaks were noted prior or after the accident, tanks were full 60 gallons with 56 useable with estimated 2:50 flight time (actual 2:40hr) both tanks were full leading me to believe the left fuel cell's clips broke allowing fuel to bleed over a rib and rendering it un-useable for flight. It would be my recommendation to check & replace fuel cell clips every annual or two. Or installing a fuel cell fence gate to prevent if a clip breaks off the cell would still have the fence to keep its shape and not be allowed to go over a rib.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No
(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Mechanical not sure, fuel cell clips most likely broke.
