Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Bird Strike (Canadian Goose) impacted the left wing outboard of the landing taxi lights and the lift strut.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

While on a routine Fixed Wing NVG Initial Qualification Training Flight a Bird Strike occurred.

The aircraft was in the traffic pattern at the Emmett, Idaho airport (S78) with the intent of an over fly of the runway 28 to observe the windsock followed by a normal landing. While clearing the aircraft in the turn, the instructor in the right seat (PNF) observed a small flock of Canadian Geese illuminated by the landing/taxi light located in the left wing. Shortly after the observation a thump was felt and heard in the cockpit. The pilot in the left seat (PF) immediately leveled the wings and noticed that a considerable amount of right aileron was required to maintain level flight.

The crew discussed controllability of the aircraft and any other concerns as to safely continuing flight. After the bird strike incident it was noted that abnormal control inputs were required to maintain normal flight attitudes and that a precautionary landing was necessary at the nearest suitable airport. It was determined that aircraft was capable of safe and controlled flight. Airport options were discussed and it was determined that the Emmett Airport which was unattended, no crash rescue and a runway 3307' long and 55' wide runway was not suitable. It was determined that the Boise Airport was the closest suitable airport since it's runway is 9762' long and 150' wide runway that would facilitate a safer landing.

Rudder trim was adjusted to max right rudder to compensate for the drag from the damage on the left wing. The aircraft was flown back to Boise with confirmation of normal flap operations and positive aircraft control while using flaps to 20 degrees while still at 5500' MSL. The aircraft was landed with 20 degrees of flaps.

Aircraft control response allowed the aircraft to be aligned properly with the runway and a 20 degree flap landing safely accomplished.
