Description of Damage to Aircraft and Other Property <i>(Use additional sheet if necessary)</i> out board 1/4 of left wing bent one of the three prop blades bent					
NARRATIVE HISTORY OF FLIGHT <i>(Please type or print in ink)</i>					
Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible. This was a planned cross country flight to evaluate student for a VFR cross country using pilotage and dead reckoning. Prior to arrival at Zwainz, student completed an airstrip evaluation (wind, length, altitude, surface, slope, obstructions) and determined landing and takeoff could be made safely within operation manual limitations and personal limits. Based on windsock, smoke movement, waves on nearby water and GPS estimated wind to be a 5 knot direct crosswind from the southeast during approach to landing on runway 5. This airport is grass on hard dirt, has slope so is considered a "one-way" strip, and a committed point on approach prior to landing predetermined to be crossing the powerlines. Crossed powerlines on speed and perhaps 50' high. Touched down in landing zone on the mains, got a skip and touched again with another skip. Student stated he was going around and started to apply power but instructor reminded student we are committed, so no go-around. Student transitioned back to landing the airplane. Airplane touched down again relatively straight and on centerline but quickly started to turn to the right. Student appeared to apply correct controls and attempted to stop the turn but airplane continued to turn right, departed the airstrip, and continued into softer ground of the plowed and harvested field. Aircraft tipped left and forward, and came to a stop resting on left wing, left main wheel and spinner. Both crew members were able to get out their doors and were uninjured.					

RECOMMENDATION (How could this accident/incident have been prevented?)															
Operator/Owner Safety Recommendation Wind sock at the location was poor so an improved windsock may help in more accurately determining the wind. Recommend instructor take the controls sooner in abnormal situations. The changes in pitch and power required to start the go around and then suddenly stop the go around and re-land the airplane may have resulted in inducing left turning tendencies and then inducing right turning tendencies with a right crosswind exacerbating that trend creating conditions that did not allow a correction back to the runway without applying more power, which was not a viable option on a one way airstrip, without the possibility of further damage due to increased speed and distance required to recover from the deviation.
