

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Porterville State: CA

ZIP: 93257 Country: USA

Latitude: 36.030 N Longitude: 119.063 W

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 11/25/2018 Local Time: 1320
mm/dd/yyyy

Time Zone: PST

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N66710

Manufacturer: Beechcraft

Model: C-23 Sundowner

Serial Number: M2387

Year of Manufacture: 1983

Amateur-Built: ☐ Yes ☒ No If Yes: ☐ Kit/Plans ☐ Original Design Make: _____

☐ IFR-Equipped and Certified

☐ Commercial Space Flight

☐ Unmanned Aircraft

Maximum Gross Weight: 2450 lbs

Weight at Time of Accident/Incident: 1967 lbs

Number of Seats: 4 Flight Crew Seats: 2

Cabin Crew Seats: _____ Passenger Seats: 2

Number of Engines: 1

Category of Aircraft

- ☒ Airplane
- ☐ Balloon
- ☐ Blimp/Dirigible
- ☐ Glider
- ☐ Gyroplane
- ☐ Helicopter
- ☐ Powered Lift
- ☐ Rocket
- ☐ Ultralight
- ☐ Unknown

Type of Airworthiness Certificate

(Check all that apply)

Standard

- ☒ Normal
- ☐ Aerobatic
- ☐ Balloon
- ☐ Commuter
- ☐ Transport
- ☐ Utility

Special

- ☐ Restricted
- ☐ Limited
- ☐ Provisional
- ☐ Special Flight
- ☐ Experimental
- ☐ Special Light-Sport
- ☐ Experimental Light-Sport

☐ Certificate of Authorization or Waiver (COA)

☒ None

☐ Unknown

Landing Gear

(Check all that apply)

☐ Retractable

- ☒ Tricycle
- ☐ Amphibian
- ☐ Emergency Float
- ☐ Float
- ☐ Hull
- ☐ Tailwheel
- ☐ High Skid
- ☐ Skid
- ☐ Ski
- ☐ Ski/Wheel

☐ Other Launch/Recovery System

☒ None

☐ Unknown

Engine Type (Select one)

- ☒ Reciprocating
- ☐ Turbo Shaft
- ☐ Turbo Prop
- ☐ Turbo Jet
- ☐ Turbo Fan
- ☐ Electric
- ☐ Liquid Rocket
- ☐ Solid Rocket
- ☐ Hybrid Rocket
- ☐ None
- ☐ Unknown

Fuel System Type (Reciprocating)

☒ Carburetor ☐ Fuel-Injected

Engine	Engine Manufacturer	Engine Model/Series	Manufacturer's Serial Number	Date of Mfg. mm/dd/yyyy	Rated Power ☒ Horsepower or ☐ lbs of Thrust	Total Time (hours)	Time Since: Inspection (hours)	Overhaul (hours)

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Collapse of front landing gear, propeller strike, engine mount damage, firewall damage

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departed KPTV approximately 1250 hours PST for a local flight and immediate return to KPTV. Intention was to warm the plane engine thoroughly, land, proceed to Del Air FBO and have engine compressions checked and perform an oil change as part of Annual. After left Crosswind departure to the west, flew 15 miles to Tulare area at altitude of 2,500 feet. Reversed course and started back to KPTV. Checked AWOS at about 10 miles out. Winds were calm and visibility 10 miles, Sky condition clear and Altimeter of 30.05. Density Altitude was approximately 1200 feet. Announced intention for 45 degree entry into left Downwind for 30 Porterville at 10 miles out and again at 5 miles out. No other radio traffic or visible traffic noted in area. Announced entry into left Downwind at 1400 feet on 45 degree. Announced left Base for 30 Porterville. No other aircraft traffic were visible or announcing in the vicinity. Announced and turned into Final. Approach was stable. Cleared threshold at 75 knots as usual. Flared and the aircraft took a little longer than usual to settle, Gave some throttle but not enough and the aircraft touched down on main gear but did balloon a few feet off the ground. Second touchdown on main also resulted in the nose wheel coming down abruptly and causing a porpoising of the aircraft. This happened twice with the aircraft going slightly higher on the second porpoise. When the nose wheel came down again, the nose gear collapsed causing the aircraft to veer to the left of the centerline. The prop struck on both ends and the aircraft veered back toward the centerline before coming to a halt. The approximate time of the accident was 1320-1325 hours PST.

There was no sign of fire or smoke so I immediately radioed to any traffic in the area that there was an accident on 30 Porterville with an aircraft disabled in the middle of the runway. I shut off all power, fuel and exited the aircraft. I examined the aircraft and noted no fuel leaks, no smoke or signs of any fire. Within a minute several vehicles came out to the location of the accident, coming from the FBO Del Air and from the Porterville City hanger. The A&P who takes care of my aircraft, Chris Shaw, from Del Air immediately got onto the phone to the FAA/NTSB to report the accident and to get permission to move the aircraft from the runway. Once this permission was received, the aircraft was attached to a rolling dolly and moved back to Hanger 17 where it is normally hangered.

After securing the aircraft in the hanger, I placed call to Mr. Jack Vanover, Aviation Accident Investigator, NTSB as he requested of Chris Shaw during their conversation. Mr. Vanover took details of the accident via the telephone. I was called back again to clarify one question concerning any ATC contact of which there had been none, explaining to Mr. that the flight was strictly local, had been at or below 2,500 feet, with the express purpose of warming the engine thoroughly for the compression testing.

I photographed the engine mount damage and the firewall as Mr. Vanover requested and sent them to him in several text messages as he had request at about 1634 hours.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I noticed that the throttle seemed more difficult to push and pull when I pre-flighted the plane. The throttle moved, but seemed to require more force than usual. I attributed it to it being a little cooler lately but thought that it would loosen with movement, and it did seem to do so. At run-up it seemed stiffer than usual but I was able to advance it and regress it.

I do not know if this affected my failure to apply more throttle once the plane ballooned into the air in order to keep up airspeed. I felt that I pushed on the throttle but I am not certain that it moved much. In any case, I did not push on it hard enough to give enough power to get air flowing over the wing again, causing the sudden descent over the last few feet which resulted in the porposiing. At that point, I did not think that I had enough airspeed to attempt a go-around and tried to settle the plane down when the nose gear collapsed.

In retrospect, I do not think the throttle was the main factor but may have contributed to my failure to fine tune and apply enough power early just before initial touchdown and to control the airspeed during the first balloon.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
