

maybe the nose gear touch ground
first. and I feel the airplane was
jumping and fly ~~again~~ again, ~~and~~
then the airplane was landed.

SAI HAO, YAN

(Daniel)

Joshua Thompson

First night flight with a fairly new student.

came into land and flared. didn't hold the nose up. released back pressure allowing nose wheel to hit onto the runway before the main wheels. This was a harder landing because we hit the nose wheel first. I personally don't believe this was the hardest land I have felt. but we definitely hit nose wheel first. bounced once. I got onto the controls and safely put the plane onto the ground. upon landing [REDACTED] I felt no abnormalities as we slowed to exit runway or throughout taxi. we continued our flight and did two more successful takeoff and landing. ~~Again~~ Again I didn't feel any abnormalities with the aircraft.
