Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Left Wing and Spar Bent. Left Wing Leading Edge cracked. Boom Hangers on left wing torn from wing. Left Gear is bent. All propeller blades are bent and curled. Right wing leading edge ripped off and damaged. Rear tail gear and spring ripped off of airplane. Rudder is bent. Aircraft frame from cockpit to tail is bent and mangled. Engine is seized. Cockpit canopy cracked. Fiberglass cockpit is cracked and bent. All Aircraft skins from cockpit to tail are bent. Cockpit door frames are bent. Vertical Stabilizer is bent and cracked.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departed Airport (KACJ) at 9:45 AM with 400 (3,336 lbs) Gallons in hopper and flew to intended field for application. I flew a field survey around the field to find power lines running through the field. I spotted four wires and made sure locate the poles to those wires. I sprayed the north side of the field and proceeded to maneuver to spray a trim pass (a spray pass at the edge of a field to start an application) from North to South on the West side of the field. On the South side of the field there was a break in a tree line 218 ft (3 spray swaths) wide. I three phase power line ran through that break in the tree line, but the poles were in the woods on both sides and not easily visible from the north side of the field. My intention was to start on the North side and fly through the break in the tree line to apply product to crop and slowly pull up and initiate my turn slowly since I had 400 gallons in the airplane and did not want to make aggressive turns. After flying through the break I started to pull up and immediately felt a massive jerk (airplane at 20 ft AGL) and loss of momentum as if being pulled back and saw a flash (nose of +9airplane struck power line) in front of the airplane and the engine made a shutdown noise as if it stopped producing power, but did not stop running (airplane at 30 ft AGL). At that moment I immediately made an extremely shallow turn (the airplane was descending and I did not want to stall) to an open field South West of the field I was spraying. I had a 7 mph tail wind and it felt as though it was making me descend faster and it felt as though the propeller was not pulling anything. Once aimed at the field, I pushed the power lever forward and did not get any response and the airplane was maybe at 15 ft at this moment. I immediately began to flare the airplane to prepare for landing. The airplane rolled through the field and I slowly applied braking to try not to make the airplane nose over. I got to the end of the field and saw a tree line in front of me and applied heavier braking and the airplane began to nose over in the ground. When the airplane started to nose over in the ground, the right wing hit a cedar tree and spun the airplane 180 degrees over a highway and the left wing hit the ground while spinning. The airplane came down on the tail and ripped off the tail gear. Once the airplane came to a stop, I took off my helmet and turned off fuel condition lever and battery. I opened the door and proceeded to climb out and walked away from the airplane and called for help.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

The accident could have been prevented if I had made a more thorough field survey and spotted the wire on the south side of the field.
