

11-28-18

Crash statement:

Left Douglas GA everything was checked out fine, pre-trip inspections and no problems found. The inflight trip wasn't anything abnormal, everything went fine. During our ground roll upon braking the plane took a hard left. We recovered by not leaving the runway to the left and went to the right hand side of the runway and recovered again. We fishtailed to the left again and recovered and upon retrieving from the left again the plane went hard right leaving the runway into the grass where it slid into a ditch and came to a stop.
