Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Structural Damage to the roof of the aircraft, propeller was bent.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On Dec 12 2018 at approximately 9:00 AM local time, Matthew and I met at DuBois Aviation on Chino Airport. We had a ground lesson for about an hour detailing slow flight and power on/off stalls with recovery. After we went out and completed preflight together. We got into the PA-28-140, tail number N5800U. Clearance was given to taxi from DuBois Aviation to runway 26R, I do not remember the taxi instruction or ATIS for that day. We took off of 26R for a Southeast departure to Lake Matthews practiced area. When the student and I arrived at the practice area, we did our clearing turns and conducted slow flight and power on/off stalls with recovery. The student had great authority over the controls the entire lesson, showing excellent control with slow flight and both power on/off stalls with recovery. I had confidence in the student, and I wanted to see him try a landing with my help. Chino Tower directed us to make left traffic for 26R from Lake Matthews, We entered left base and then final about 2 miles from Chino. He went into the approach knowing slow flight and power on/off stall with recovery, The final was going well with a great glide speed and glide slope. The student had full 40° of flaps down, and began to get a little low on final. I prompted him to add power, in which he did. We flew over the beginning of the runway and I reached over to gradually reduce the power back to get down into ground effect. I was on the controls as well, and with little help from me with flaring we landed on the runway, to the right of the center-line and a little fast but well. At this point I believe to correct for being right of the center-line the student added either left brake or left rudder, putting us into into a skid almost instantly. Power was back and I put full right rudder, unfortunately we were skidding too far left and by the time I got it straight we were heading to the side of the runway. I was prepared to hold the nose up and allow the grass to slow us down on getting the plane straight, but on straightening the plane runway sign 21-3 was about 15 feet in front of us. We went straight into 21-3 runway sign and flipped the aircraft. We both communicated with each other, making sure each other were fine. I turned the master off as well as brought the mixture closed. I then turned the fuel selector to off, taking the keys out of the ignition as well. Matthew I and then proceeded to kick the door open to no avail. Airport crew came in about two minutes and lifted the wing slightly to allow us to kick the door open and escape.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I believe a lesson on the rudder controls being tied to the nose gear and sensitive would have been and appropriate lesson to teach.
