Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Substantial damage to right wing, including aileron and flap. Left wing's leading edge, outboard strut attach point. Prop and engine in snow, assuming prop's not fixable. Engine will most likely need tare down.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Landed aircraft in 3 + ft of snow at Buffalo Hump (private strip) and dropped off single passenger and gear. With passenger on skis and myself on snowshoes, we packed snow on the runway, from the planes original tracks, enough to get the plane up to the end of the runway and turned around. Then, we packed the tracks wider for the entire duration of the runway. I then tried to takeoff and had to abort due to tail wind and snow conditions. Please note the airport is at about 7,600 ft elevation and has slight downhill for take off; tall trees on uphill end makes for one way in and one way out. After packing a second time with aircraft and skier, I tried to take off in the low of the wind. The aircraft was airborne, was in ground effect then settled touching down again, got airborne again and because the airport drops off on the end I thought it would continue to fly; however, it settled again to the snow, this time out of runway and into some trees.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

In reviewing this over and over, I think the wind may have been gusting more than I observed while snow shoeing the runway. An updated windsock or some kind of wind identified may have alerted me as to what the wind was doing on my second take off attempt. Thus, that may have alerted me to abort and wait out the wind. However, had I positioned some kind of ribbons along the runway, alerting me to the tailwind, I most likely would have aborted my takeoff attempt much sooner.
