

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Los Banos State: CA

ZIP: _____ Country: USA

Latitude: 37.038 Longitude: -121.118

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 05/28/2019 Local Time: 1530

mm/dd/yyyy

Time Zone: PDT

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N501J

Manufacturer: DEHAVILLAND

Model: DHC-2 BEAVER

Serial Number: 1451

Year of Manufacture: 1961

Amateur-Built: ☐ Yes ☒ No If Yes: ☐ Kit/Plans ☐ Original Design Make: _____

☒ IFR-Equipped and Certified

☐ Commercial Space Flight

☐ Unmanned Aircraft

Maximum Gross Weight: 5370 lbs

Weight at Time of Accident/Incident: 4630 lbs

Number of Seats: 8 Flight Crew Seats: 2

Cabin Crew Seats: 0 Passenger Seats: 6

Number of Engines: 1

Category of Aircraft

- ☒ Airplane
- ☐ Balloon
- ☐ Blimp/Dirigible
- ☐ Glider
- ☐ Gyroplane
- ☐ Helicopter
- ☐ Powered Lift
- ☐ Rocket
- ☐ Ultralight
- ☐ Unknown

Type of Airworthiness Certificate

(Check all that apply)

Standard

- ☒ Normal
- ☐ Aerobatic
- ☐ Balloon
- ☐ Commuter
- ☐ Transport
- ☐ Utility

Special

- ☐ Restricted
- ☐ Limited
- ☐ Provisional
- ☐ Special Flight
- ☐ Experimental
- ☐ Special Light-Sport
- ☐ Experimental Light-Sport

☐ Certificate of Authorization or Waiver (COA)

☐ None

☐ Unknown

Landing Gear

(Check all that apply)

☐ Retractable

☐ Tricycle

☒ Amphibian

☐ Emergency Float

☐ Float

☐ Hull

☐ Other Launch/Recovery System

☐ None

☐ Tailwheel

☐ High Skid

☐ Skid

☐ Ski

☐ Ski/Wheel

☐ Unknown

Engine Type (Select one)

- ☒ Reciprocating
- ☐ Turbo Shaft
- ☐ Turbo Prop
- ☐ Turbo Jet
- ☐ Turbo Fan
- ☐ Electric
- ☐ Liquid Rocket
- ☐ Solid Rocket
- ☐ Hybrid Rocket
- ☐ None
- ☐ Unknown

Fuel System Type (Reciprocating)

☒ Carburetor ☐ Fuel-Injected

Engine	Engine Manufacturer	Engine Model/Series	Manufacturer's Serial Number	Date of Mfg. mm/dd/yyyy	Rated Power ☒ Horsepower or ☐ lbs of Thrust	Total Time (hours)	Time Since: Inspection (hours)	Overhaul (hours)

Eng. 3								
Eng. 4								

Last Inspection Type

- ☐ 100-Hour
- ☐ AAIP
- ☒ Annual
- ☐ Continuous Airworthiness
- ☐ Conditional Inspection
- ☐ Unknown

Date Last Inspection: 06/19/2018
mm/dd/yyyy

Airframe Total Time: 4690 hrs

hours measured at (Select one)

☒ Last Inspection ☐ Time of Accident/Incident

Type of Maintenance Program (Select one)

- ☒ Annual
- ☐ Conditional (Amateur-built only)
- ☐ Manufacturer's Inspection Program
- ☐ Other Approved Inspection Program (AAIP)
- ☐ Continuous Airworthiness
- ☐ Other, specify: _____

Description of Fire Extinguishing System

- ☐ None
- ☒ Specify: Handheld portable bottle

Propeller 1

- ☐ Fixed Pitch
- ☒ Controllable Pitch
- ☐ Ground Adjustable

Manufacturer: HARTZELL

Model: HC-B3R30-4B

Propeller 2

- ☐ Fixed Pitch
- ☐ Controllable Pitch
- ☐ Ground Adjustable

Manufacturer: _____

Model: _____

ELT Installed: ☒ Yes ☐ No

If Yes:

ELT Manufacturer: ARTEX

Model or Part No.: P/N 453-0150-1A

TSO No.: ☐ C91 (121.5 MHz) ☒ C91a (121.5 MHz)
☐ C126 (406 MHz)

Was ELT still mounted in aircraft? ☒ Yes ☐ No

Was ELT still connected to antenna? ☒ Yes ☐ No

Did ELT Activate? ☐ Yes ☒ No

If activated:

Did ELT Aid in Locating Aircraft? ☐ Yes ☒ No

If not activated:

- Indicate Reason:
- ☐ Impact Damage
 - ☐ Fire Damage
 - ☐ Battery Expired/Damaged
 - ☒ Unknown

Additional Equipment (Check all that apply)

- ☒ ADS-B
- ☐ Airframe Parachute
- ☐ Angle of Attack Indicator
- ☒ Autopilot
- ☐ Data Recorder
- ☒ Electronic Flight Bag or Handheld Device
- ☐ Electronic Multifunction Display
- ☐ Electronic Primary Flight Display
- ☐ Handheld GPS
- ☐ Heads Up Display
- ☐ Onboard Weather
- ☐ Satellite Tracking Device
- ☐ Stall Warning System
- ☐ Video Recording Device
- ☐ Other, Specify: _____

OWNER/OPERATOR INFORMATION**Registered Aircraft Owner**Name: Diesel Aquisitions LLCCity: MilpitasFractional Ownership Aircraft: ☐ Yes ☒ NoState: CA ZIP: 95035Country: USA**Operator of Aircraft**☒ Same As Registered Owner☒ Same Address as Registered Owner

DAMAGE TO AIRCRAFT AND OTHER PROPERTY**Aircraft Damage**

- ☐ None ☒ Substantial
☐ Minor ☐ Destroyed
 ☐ Unknown

Aircraft Fire

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Explosion at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Right strut and wing broken, engine and propeller, left float dangling, broken windshield, aircraft submerged in lake for about 8-9 hours. some damage to tail. \$400,000 to \$600,000 in estimated damages.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Every winter we hanger the Beaver at Hollister airport. Every summer we take it up to British Columbia. My main job is to fly a Cessna Citation Excel and a Swearingen Merlin IIC. When I am up in Canada on a trip in the Citation or Merlin, I do local flights in the Beaver. Since it is not good to have a Beaver sitting idle for the winter months I try to go down once per month if my schedule allows it. I typically go for a local flight of one hour or less and practice landings on water and land. On May 28th I departed Hollister Airport to exercise the Beaver by myself.

I started the engine about 1450, warmed it up, ran engine and systems checks using a checklist. A little after 1500 I departed runway 24 with headwinds of about 12 knots. I was pretty light but still with these amphibian floats and their drag, could only get 300-400 fpm at best rate of climb and this is normal. I got the flaps to the climb position and set power to 30" mp and 2000 rpm. I was so intent on having the best climb speed that I completely forgot to raise the landing gear. It took me about 8 minutes to get to 3000'. I leveled off and set power to 28" and 1800 RPM and speed increased to about 110 mph which is normal for the airplane with the gear up and the flaps in cruise position. At 1525 I surveyed a place to land off Qiene Sabe Point on San Luis Reservoir. As the water was glassy I chose the point to help with depth perception as it is hard to judge the water when it is glassy. During the downwind portion I did a pre-landing flow check: Primer locked, fuel selector on the rear tank (which had about 15 gallons in it based on departing with 25 in rear tank and 35 in middle tank. Forward tank was empty), Flaps were moved to takeoff (and then to landing position on base), Prop lever full forward, mixture rich, carburetor heat not used as it was about 80 degrees and carb temp was well above 32. Then glancing at gear lights I saw green and it did not register after 40 years of looking for green lights in land airplanes that I should have looked for blue lights. On final about 25 feet above the water I had the nose up and added power to establish a 60 mph speed and a very shallow descent of about 100 feet per minute. When I made contact with the water there was an immediate sensation of drag (main wheels) and then a very fast forward pitch forward and down (as the nose gear dug in). I saw a wall of water coming toward me as the Beaver went vertical. Within a second, I was upside down hanging from my seat belt, (I had my shoulder harness on), shocked, and water started rushing in. As the water quickly approached my head I took a gulp of air and became almost completely immersed. Underwater, I looked for the door and handle but could not see it as the water was full of algae and visibility was about 2-4 feet. I also could not move as I still had my seat belt on. I realized this and thought "seat belt" and released it. Once free, I dropped down to the ceiling and turned around and came up for air. By then there was about two feet of air between the water and the floor (which was now the ceiling). I took another breath of air and submerged to locate the door and handle. I could not see the door or find the handle and it did not help that everything was upside down. When I came up there was about a foot and one half of air and I thought this is how people drown... I looked to the rear of the cabin and saw there was air back there and also knew there was a baggage door there that could be my escape route. Confused and upside down I attempted to swim/climb over the rear two seats with the foot of air remaining. In reality I was trying to squeeze under the 6 inch clearance between the seats and floor. I figured it out and took another breath and swam under the back rests of the rear two rows of seats. I came up in the baggage area and there was still about a foot of air remaining. I quickly punched the baggage door out and open. I swam out and got on top of the upside down Beaver. I watched the last few bubbles come up from the cabin. It was completely full of water. It had taken me about 20 seconds to get out and within 30 seconds it was completely full of water. I rested and looked out on the lake and shore. Not a boat, vehicle or soul could be seen. I had lost my glasses and my hearing aids were in the airplane of in the lake. My cell phone also had vanished. Somehow a half empty bottle of fresh water floated up and I grabbed it. I did not know how long the airplane would float and I did not want to lose its location. I attempted to paddle it with one of the oars that was on one of the floats. (the airplane would float for about 10 hours before it was removed from the lake after drifting slowly about 2 miles from the impact site). I swam about 300 feet to shore and dried my clothes (t-shirt, jeans, boxers, socks and running shoes).

I stacked rocks to mark the location of the airplane in case it sank, and prepared for what I thought would be a 7-10 mile hike to the visitor center on the far side of the lake off Highway 152. After about a 2 mile hike and about 1630 I came upon two fishermen that let me use their phone. They also directed me to the road that leads to the Basalt Day Use Area toll/inspection station. After about 1 mile a car picked me up and took me to the toll/inspection station where I was helped by the Park Rangers to start the recovery of the aircraft. It was about 1730 by this time. A airplane mechanic and another friend arrived about 1830. Action Towing arrived about 2000. They brought a tow truck and a boat. I got in the boat and went out to where the airplane was floating. They tied a line on it and dragged it inverted back to the boat ramp. They ordered another tow truck to come and I decided there was no need to stick around. I left the scene at about

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

CHECK LIST:I should have used the checklist once airborne. Both the after take off and before landing checks would have saved me from this event. I use them in the jet and turboprop but became complacent in the easy to fly Beaver....

GEAR WARNING SYSTEM: This Beaver aircraft should have a gear warning system that provides both voice and visual warning if the landing gear is not in the correct position for either a runway landing or a water landing. Airspeed activation speed could be set for 80 mph. a female voice that would say "wheels up for water landing" if the gear is up. A male voice that would say "wheels down for runway landing" The cost is about \$600-800 plus installation. Insurance companies could offer a \$1000 rebate to encourage the installation of these devices. Shops that do the annuals on amphibians should go on a campaign to offer installation of these devices and work with the insurance companies to get the rebate money. <https://www.aircraftspruce.com/catalog/avpages/amphibiangear1.php>

INTERIOR DOOR HANDLES:The interior door handles on this beaver are recessed and require the use of a thumb and fingers to operate. They are hard even if you are right side up and dry. So hard to operate that I made a plywood handle to engage the interior door handle for the passengers. They all should be replaced with lever style like the outside handles or automobile handles. this could be another insurance company/maintenance facility campaign.

<https://www.theglobeandmail.com/news/british-columbia/seaplane-operators-to-fit-fleet-with-new-door-handles/article571826/> :

"After 60 years, the de Havilland DHC-2 Beaver aircraft door handle - counterintuitive to use, and difficult to reach for passengers on the centre bench - is getting an upgrade.The improvement is part of an ongoing effort to make it easier for float plane passengers to escape in a worst case scenario, said Philip Deane, director of Salt Spring Air. The original handle is a recessed horizontal bar, about the width of a

☐ Jet A-1

☐ Automotive

Other Services, if Any, Prior to Departure**EVACUATION OF AIRCRAFT**

Was an emergency evacuation of the aircraft performed? ☒ Yes ☐ No

Method of Exit – Describe how the occupants exited and how many occupants evacuated each location

as stated above, I exited via the rear baggage door as I was unable to locate the normal exit which would have been the left forward pilot door. I had to swim out of the aircraft.

OTHER AIRCRAFT – COLLISION (If air or ground collision occurred, complete this section for *other* aircraft)

Aircraft Registration Number

Manufacturer: _____

Model: _____

Damage to Other Aircraft

☐ Destroyed

☐ Minor

☐ Substantial

☐ None
