Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft is destroyed. Main rotor blades impacted ground under full power. Cabin is structurally damaged. Tail boom is separated from fuselage. Engine experienced a sudden stoppage. Skids are bent. Aircraft is laying on its side.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Aircraft N350ST, a AS-350B2 with the LTS-101-700 engine conversion, departed it's home base at the Majestic Valley Lodge near Glacier View at 1215 Alaska Time. The aircraft departed for the Nelchina Glacier area for a day of helicopter skiing. The aircraft returned twice more to the lodge for additional skiers and refueling. The aircraft loaded 50 gallons at 1245 and departed for ferrying skiers to additional runs.

At approximately 1255, N350ST was performing a 2-skid landing on moderate terrain (~20 degree slope) during the unloading of our guests, near the peak of the mountain that we being skied. During the unloading process, the pilot observed some loose rock/frozen gravel stir and go through the rotor disk. The pilot observed the rock move, as well as feel the impact through the flight controls. The aircraft felt controllable and the pilot repositioned 30 ft laterally to unload 2 remaining skiers. The pilot noticed a "1-per" vibration in the main rotor disk. Approximate elevation of the rock striking the blade was 5500 MSL.

The pilot then descended to shut down and perform a visual inspection of any possible damage. During the decent flight, approximately 2000 ft, the flight controls became progressively hard to control. The vibration during this short flight became progressively worse during this very short flight, resulting in landing with speed in a less than perfect area with flight controls that were difficult to control. The aircraft impacted with some amount of speed and settled on its side. The only occupant of the aircraft was the pilot. The pilot was uninjured and was able to egress through the smashed from windshield.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Recommend reinforcing the hazards associated with performing "toe-in" slope landings. This includes rotor position relative to the ground as well as the actual ground composition.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No
