NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

My flight instructor and I took off from Ridgeland Airport in route to Allendale at approximately 1400. We performed six take offs and landings at Allendale and returned to Ridgeland at approximately 1500. The wind was calm and visibility approximately 10 miles. We checked the weather and NOTAMS at Ridgeland and Allendale, the weather conditions stayed the same while in route going to and coming back from Allendale with very light precipitation north of Ridgeland. Pattern altitude at Ridgeland was 1000 ft. We entered a left downwind for runway 3, wind remained calm with no precipitation. Pattern was normal on base and final, speed on final was 80 knots with no significant crosswind. At the numbers before the flair, we encountered extreme wind sheer which was described as a microburst. We were forced up and to the left and rolled to our left. We applied full power in an attempt to climb out, the climb performance was negligible at this point and we were forced down to the side of the runway. We impacted the area to the left of the runway still trying to climb with the engine at full power.

Statement previously submitted by co-pilot, instructor, Eric Mann:

"We took off around 1400 Local Time from Ridgeland Airport, flew to Allendale to practice landing patterns and returned to Ridgeland around 1530 Local. We checked the weather and NOTAMS before departing, I do not recall the exact conditions but it was less than 10 knots of wind and good visibility. We also got weather in flight via Allendale's AWOS which was reporting calm winds. The conditions remained the same during our entire flight until we came back to Ridgeland. We flew through a small amount of precipitation about three miles West of Ridgeland, the precipitation was not enough to reduce visibility, and we quickly flew through it. We entered the pattern at a 45 to the downwind for runway 3 at 1000' MSL. We flew a normal base and final. On final there was no abnormal weather conditions, the plane was operating normally, we were tracking straight down centerline without any cross wind controls. The last airspeed I recall seeing was 80 kts as we approached the extended threshold. As we were coming over the runway numbers we encountered severe wind shear, I believe a microburst. The plane pitched up, and began rolling left. I immediately called for full power and the aircraft controls. As I came onto the controls I pushed the throttle, verifying it was full, which it already was. I leveled the wings, pitched up to about 10 to 15 degrees, did not change the configuration (gear down, full flaps, prop full forward), but the aircraft simply did not have enough performance to climb. We were pushed to the left of the runway where there is construction going on. The aircraft impacted a pile of gravel about 20' higher than the runway.

We were around 1/2 full on gas, the only occupants were myself and Phil, no cargo. The aircraft continued running until impact, I did not detect any abnormalities in the engine or plane, other than it could not climb.

I believe this was the result of a microburst. The plane pitched up right over the numbers which would be the headwind component, then as we added power we entered the downdraft component, and simply did not have enough performance to climb. A Mooney 201 normally has excellent climb performance, we were relatively light, around 75 degrees F, at 80' MSL, and it simply could not gain altitude even with full power applied. Also, as we got out of the plane the wind was gusting for just a few minutes (maybe less), and then rapidly went back to being calm."

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Accident was due to weather and was unavoidable. Unexpected condition on landing could not have been predicted or prevented.
