Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Left gear leg was pushed backward when the plane rolled over a concrete pad. Awaiting full damage and repair estimate. When the plane went off the left side of the runway, two runway edge lights and a taxiway sign were damaged.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Yesterday I flew to Benton past Redding and back. I knew it was a turbulent day and planned my flight above it, which worked out great. Landing at Benton was interesting and gusting heavily 25-30+ knots, but I flew it down and gracefully landed and taxied to the ramp.

Back at LVK at around 5:10 PM was not as graceful. Winds were reported 12 knots 300 to 030 gusting to 19. I am very familiar with North crosswinds at LVK, so I came in carefully and had the plane aligned with the runway centerline and fought keeping it there to the ground. When I touched my right wheel, I was probably 1 foot to the left of centerline (I know for sure since I practice with video so much). The plane started to drift sideways to the left. Once the left wheel was in the gravel, I realized that it was too late for a go around. From how it felt I am pretty sure that full power would have spun the airplane and I may have ended up in worse shape. Instead I rode it out as straight as I could.

I exited the asphalt on the left side of 25R right before Charlie, which is 1000 feet past where I touched down, went over Charlie and into the grass past Charlie. I could hear lights and the Charlie sign getting hit along the way. I just kept the yoke back and rode it out into the grass, which seemed to be the right decision once I left the asphalt.

The tower asked if I needed assistance. I asked to shut down and do a quick walk-around to see what damage there was. Fired back up and was able to get out of the grass and back on 25R at Delta and taxi back to the hangers. At first all I saw were grass stains on the prop, but I have a wrinkle in the fuselage at the left gear leg and the wheel measures about 1.5" further back than the right side.

I probably was going 40 when I started off and maybe 15+ when I went over the bump at Charlie. All in slowmo in my mind's playback now, but I have since taken pictures of the tracks and know for sure this is correct.

I do think I made the right decision to not hit power once I had touched. I think it was likely a gust way over 20 that pushed me sideways. However... I could have done a couple low approaches and maybe decided to head to Byron or Concord to wait it out or get a ride home. Hindsight is 20-20 right?

AOPA has a good article on crosswind landings today and they recommend exactly how I was configured, no flaps. But... I was obviously past the crosswind capability of the airplane. I may have been OK if the gusts were from the same direction, but I think I ended up with a violent quartering tailwind after touching pavement.

I reviewed the ATC tape and here is the timeline:

5:03 PM announced position at Altam and cleared for right base 25R

5:04 PM ATC announce wind at 020 9 knots gusting 19 (I remember thinking I might ask for a switch to 7)

5:06 PM ATC announced wind at 330 – 030 9 knots gusting 19

5:08 PM Cleared for 25R – thinking this needs to be carefully done and I am readying myself to be ready.

5:09 PM ATC announced 350 at 12 gusting 19 – That was probably good clue to reconsider landing at Livermore!

5:10 PM I am off in the grass.

After landing I saw a 172 on it's side with one gear leg torn off on the ramp. Later someone told me of another guy hitting lights and taking off. Small consolation with as careful as I try to be.

I have since downloaded the NOAA weather summary and saw that winds were reported as high as 27 knots at 340 at KLVK.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

In the future, when the winds are being reported as gusting, I would likely fly the runway without touching down to feel the winds out close to the surface. If it seems severe I would fly to a close by airport like Concord or Byron, which have crosswind runways available and wait out the winds or get a ride home.

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

I have pictures of my tracks where I went off the runway, if needed.

The 1960 Cessna 182C model does not have a demonstrated crosswind listed in the manual. However, most say it would be 17 to 19 knots demonstrated. I have practiced with 20 knots many times before and landed safely.

Livermore is my home airport so I am very familiar with the possible winds there. I have been flying there since Spring of 2016.

All that said, I will be modifying my pre landing checklist to include a low level pass in the event of serious crosswinds.
