NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

First solo flight; after touch and go and full stop Landing My instructor had me drop him off at airport office. I taxied to runway 29. I communicated my intention to take off and then took off with the plan to conduct 3 full stop landings.

I took off heading 290 deg, at roughly 500' and 85+k I raised flaps then began my turn onto cross-wind carefully watching the towers located near the end of the runway. I established pattern altitude (5700') at the end of crosswind or shortly after then turned onto downwind and reduced power to 50% and engaged my first setting of flaps. At this point I communicated my intention to land with full stop. Earlier prior to my taking control of the airplane my CFI and I had established a landmark that I would use to turn base for this day. (a large white silo) I turned on Base and reduced power to 25%. while on base I began reducing altitude and established full flaps. After on base again communicated my intention to land with full stop. as I approached the runway I did not like the way the airplane was centered and decided to go around. which was the training I received if at any time i was not comfortable with any approach. I immediately increased power to 100% and raised flaps to 50%

I once again climbed to pattern altitude, raised flaps and turned airplane for down wind again carefully watching the two towers. again I communicated my intention to land with full stop. Once at pattern altitude I reduced power to 50% once again. Additionally I decided to extend downwind just a bit beyond the silo to allow more time for my final. I flew just past the point chosen by myself and instructor then turned on Base (again communicated my intention to land with full stop) Once again i reduced power to 25% and engaged full flaps. As I approached the the runway glide slope and speed were right on. My speed was 8right at 83 K as i crossed the threshold. at that time i felt very comfortable with the approach.

As I was bleeding off speed (letting runway come to me) i straightened the airplane with a bit of left rudder. This was because the airplane was slightly crabbed to the right. I suspect a small x-wind had occurred.

At this point my memory is not as clear as i would like but I believe the plane landed with a small bounce then and heading somewhat to the left. I was conscious of not wanting to over-correct the airplane with exaggerated right or left rudder when the airplane went on the grass to the left side of the runway. i applied full brakes and decided to allow the airplane to come to rest in the grass with full breaks.

After rolling for a short time I saw a ditch and knew that it could not be avoided. i decided that my only option was to try to slow the plane as much a possible and not make any sudden control movements.

I hit the ditch flipping the airplane on its top. as quickly as possible i pulled the mixture to cut-off and turned off the aux fuel pump.

Help was on site within a very short time. where i received help exiting the airplane.
