Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Gear up landing resulting in Prop Strike , engine damage yet to be determined. Aircraft landed on belly just below pilot area. Destroyed underside mounted antennas, ground off skin rivets and began to grind off belly skin. Some damage to cross beam area and ribs at contact point due to scraping the ground. Extent of damage yet to be determined by repair center.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

Departed Ak-Chin Rgnl (A39) at approx 3:30 p/m 05/09/19 after fueling stop, with full fuel (90) gals. Runway 22 in use. Made Right turn out to north heading 06 degrees towards KCHD. Climbed to 3500 ft with gear retracted.. began to monitor KCHD AWOS (128.32) for wind direction and altimeter (29.94) and runway for landing . Winds were out of the west at 250 degrees and 6 kts. Runways 22L and 22R in use. At 10 miles out contacted tower on freq.133.10 . Received tower request to ident ,then Tower acknowledged contact. Instructions were to expect runway 22L and call when entering downwind. Entered downwind and was cleared to land on 22L as number 2. Cautioned by Tower about Helicopter traffic crossing below. I was distracted watching the traffic and acknowledged having traffic in sight. I failed to go back to the landing checklist, assuming it was completed. Did not put landing gear down. Tower cleared me to land, but they were partially blocked. I asked for repeat of instructions and i was cleared to land on runway 22L. Watched the Helicopter traffic clear out to no factor, turned to base with 20 degrees of flaps then turned to final. Reduced power to landing configuration and never heard any landing gear warning go off. Gear was still retracted and i landed on the belly, and slid to stop after shutting down engine. Prop had already contacted pavement. Aircraft stayed upright and never tipped to either side. Upon aircraft removal with tow truck to put gear down, we again did not hear the gear alarm.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Allot of distractions for me occurred at a busy airport . I should have concentrated on my own landing procedure. Need to be focused on the check list sooner and complete all steps. Warning horn for landing gear up during landing needs to be inspected more frequently to assure proper operation.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Gear up warning horn system malfunction Yet to be determined at inspection.

Method of Exit – Describe how the occupants exited and how many occupants evacuated each location

I called tower on the aircraft radio to let them know i was ok and there were no fires or emergency needs after aircraft stopped moving. I unbuckled seat belt and shoulder harness and stepped out on to the runway and walked to front of airplane so they could see me from the tower.
