Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Gear Up landing - Propeller, Engine, Light Right wing damage from runway light, belly from skidding on asphalt. Based on dollar amount of hull insurance, insurance company has totaled the aircraft.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On April 15th 2019, I along with my office manager Tasha Potter and her husband Jim Potter departed Great Bend Municipal Airport (KGBD) for a quick flight to Hutchinson Airport (KHUT) for lunch. On departing at about 4,000 foot indicated I contacted Kansas City Center 118.8 and asked for VFR flight following to KHUT. I continued to climb to 5,500 Indicated being on a easterly heading.

During the flight I was handed off to Wichita approach I believe it was 124.9. As I have done this several times I was expecting to be handed off to Hutchinson tower at about 15nm to then be able to descend into the Hutchinson airspace with ATC permission. Wichita approach didn't had me off until about 6.5nm out and I was at 5,300 indicated. Hutchinson radio traffic was very active and contact wasn't until about 4nm out and I was cleared to land number 2 behind another aircraft on 17.

I was still at 5,300 indicated and as a young pilot I was following ATC so I chopped power put prop in max RPMS as a speed brake and put 10 degrees flaps and started to slip the aircraft to descend. I was also concerned with the amount of other aircraft in the area as my iPad with fore flight lit up with other planes in the area. So I was concerned and was following ATC to avoid them. Later I learned it was the air force doing touch and goes. As I was too high I passed 17 and elected to continue to 22 with a slight cross wind. ATC said I was cleared for 22. In the confusion of a straight in landing and in cockpit chatter between passengers I lost track of the gear position. I didn't realize the mistake until the crunch at the end.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

As a young pilot in flying years, I was following ATC instructions. As I have now learned from this that being VFR I could and should have asked for a go around as I was too high in the pattern to land safely. ATC during VFR is there to help and since I'm PIC it was my responsibility to tell them I wasn't comfortable with the situation and ask for a go around.
