SUBJECT: AIRCRAFT ACCIDENT WITH N5622D (Powered Parachute)

April 15, 2019

Gary Cranmer, Elizabeth, Colorado

As usual, on most days that I fly, I check the weather with Intellicast.com and look at the hourly forecast for the day. The Weather Underground showed the wind forecast to be below 5 knots from the North. The Weather Underground has a local reporting station. The one at "Bonnie Ridge Station" has always been the most accurate for the valley I fly from. It is only a mile East on County Road 17. I also look at "Ryan Carlton Balloon Forecast". Both sources had forecast the wind from the NE at 4-5 knots at that time.

Just after lunch, I towed my cargo trailer 1 mile down to the hayfield I use, and I did normal pre-flight and engine warm-up. I ran the engine 3 minutes at 2500 RPM, then I ran the engine 2 minutes at 3500 RPM for warm-up. Then I do a full power mag check.

The wind at the hayfield was from the SW at 6 mph by my wind sock despite what the forecast had said so I lined up for takeoff in the NE corner and angled across the field pointed to the SW to get as much headwind as possible out of the X-wind. On takeoff, my parachute did not "kite-up" as quickly as normal due to my early power application. The chute got "locked" in the prop wash, and I had to pump the steering levers to get the chute to "kite-up" which made my take-off roll a little longer than normal.

Once airborne, my climb rate was slower than normal with only 3 mph of head wind. I angled to the SW to get more head wind and, hopefully, climb better. I started my usual 180 degree turn at the end of the field to climb out to the NE. The turn "downwind" reduced my climb rate to zero and actually started a descent. I have flown off this field for four years and never encountered such a descent rate during my turnaround. I realized I did not have enough altitude to make the 180 degree turn. As I hit the top rail of the first fence, I shut the Mags off. I stopped about 20 yards past the second fence. I took off my headset and my seatbelts. I used my shirt as a bandage on my left leg since it was cut by the fence and then I walked about 150 yards to the farm house. They helped me call 911, and the fire department arrived and called for an airlift to Aurora South Medical Center.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Having operated for the last 4 years off this hayfield I was over confident. I had 2 opportunities to abort this take-off and failed to take them because I was confident from my previous history flying here. When the chute did not kite up quickly I could have aborted. When my climb rate was slower than normal I could have aborted.
