Description of Damage to Aircraft and Other Property <i>(Use additional sheet if necessary)</i> Prop strike, only other damage occurred during aircraft salvage.			
NARRATIVE HISTORY OF FLIGHT <i>(Please type or print in ink)</i>			
Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible. 14:00 BMG- Performed walk-around, all good, oil near full. 14:55 Normal run-up. Oil pressure needle at 12 o'clock position. 15:00 Departed BMG VFR north to avoid Indianapolis Class B airspace. 15:30 Turned north-east once clear of class-B and notice oil pressure needle touching yellow arc, at the 10 o'clock position. I tapped the guage, the needle danced a little but settled back at 10 o'clock pos. I decided to make a precautionary landing to further evaluate the situation. Boone County (614) was about 15 miles north-east according to "Fore Flight". That appeared my best option. Better an airport than a cornfield if the prop had seized. 15:45 As I approached Boone Co. I tried to broadcast on 122.8 with the hand-held radio, but got no response. Fortunately I saw activity at the hangars (BONUS!) I lined up on the north oriented runways. I planned to do a low pass to evaluate the wind and runway environment. On the first pass winds were NW, light and variable, when I noticed a grass strip right next to the asphalt one and chose that one for the preferred conditions for a tail wheel aircraft. Oil indication slightly lower, but no other indications of impending failure, so I made another pass to evaluate the surface conditions. (i.e. firm, grass condition- wet or dry, etc...) I did that pass skimming the surface, touching three or four times. Seemed firm, with no visible obstructions, ditches, furrows, or puddles. So far, so good! Final approach was stable, 80kts (as recommended by previous owner.) Touchdown was smooth, kept tail up, no brakes. About two thirds down the runway, as the tail started to lose lift, I hit a soft patch of muddy soil. Over I went, tail over nose. I was trapped under the plane for a couple minutes until the guys from the airport came to help me out. They flipped the plane back over and they helped me out. Besides a bloody nose I was unhurt, but the police had arrived and told me to go get checked out, so I did as I was told.			

RECOMMENDATION (How could this accident/incident have been prevented?)			
Operator/Owner Safety Recommendation Outside of having some sort of "foreknowledge" of the muddy patch down the runway, I can't think of anything I could have done differently to prevent this outcome. With years of African, Asian, and Central American "bush" flying I realize, sometimes these things just happen.			
MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)
