NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The pilot in the tail-wheel-equipped airplane landed and wanted to takeoff again. During the takeoff roll from the center of the runway, the airplane was configured for takeoff, and he had a left crosswind during the takeoff roll on RWY 09; wind was from the north. The combination of the left crosswind and the p factor were more than a full application of right rudder could compensate for. Pilot also had the left aileron into the wind, because of the known wind.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Slower application of the throttle and keeping the tail wheel on the ground longer during the takeoff roll, will prevent this type of accident from occurring in the future.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No
