N2429E

Incident PAOR 12May, 2019

Landing at Northway, Alaska on Runway 05 at approximately 1330 local time. Winds light and variable about out of 050deg. Clear skies. No other traffic. During a wheel landing the touchdown was smooth, barely noticeable. Rollout began straight. Suddenly without any cause that I could detect the airplane began to drift left. I was not using any brakes just rudder control when suddenly it seemed that I had no rudder authority and the airplane dipped right and veered more to the left and then sharply to the left. The airplane then ground looped and the nose dug in and it flipped over on its back. Our forward motion was almost nil when it flipped over. I was able to unclasp my seat belt and open the door to get out. Then I assisted my Son in getting out. After a quick check for fuel leaks and possible fire I was able to reach in and secure the systems on the airplane. The Emergency Fuel Shut Off, Fuel Tank Selector, Mixture Control, Battery Master Magnetos (the key had broken off in the ignition), and all Radios.

We were both ok with minor abrasions but no cuts or bruises.

Helen from the Flight Service Station came out to check on us. The Customs Agent arrived shortly after. And then the State Troopers arrived.

Upon inspection I found the right tire had cuts on the sidewall and tread with no noticeable skid or wear marks and it had broken away from the wheel at the bead. These were new tires.

I found about a half dozen small pieces of the wheel on the runway where there were the tire skid marks (I had not used brakes) began and leading toward the aircraft.

So while I do not know what happened I suspect either a tire failure or the wheel failed causing the tire to break away at the bead which led to the veering and loss of control of the airplane.

We are both feeling blessed and very happy to be ok.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I cannot think of a recommendation. All inspections were current. A preflight inspection was performed before every departure. The weather conditions were perfect. The runway was good. I am competent as a pilot in this type aircraft and as a CFI have given many hours of instruction in Tail Wheel aircraft including recent instruction in the C185. I believe it was a failure of the Right Wheel Assembly that caused this accident.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

I believe the right Main wheel assembly failed causing this accident
