STATEMENT CONCERNING N51DM DEER STRIKE

Statement of Francis S. Key, ATP, [REDACTED] pilot of N51DM regarding flight on 11 May 2019. I was flying as pilot-in-command. Flying as co-pilot was Chuck Opperman, ATP, retired corporate pilot.

Date & Time of incident: 11 May 2019 10:00 AM Sky clear, scattered clouds

At approximately 10:00 AM on the morning of Saturday, May 11th we executed a takeoff from KWAY on runway 08 in N51DM, a Gulfstream Twin Commander. We had filed and IFR flight plan for Nashua, NH (KASH). Within one second after rotation at 95 KIAS we felt a great impact force from a deer strike on the right side of the fuselage. The co-pilot reported that he saw the deer on the right side of the runway seconds before impact. I never saw the deer that struck the plane.

A few seconds after the impact point, indicated airspeed which had been accelerating rapidly showed 120 KIAS. We had just passed a point on the runway 1500 feet from where we started the takeoff roll which meant we had 2300 feet of runway remaining. A quick calculation indicated we did not have sufficient runway length to attempt a landing at the present velocity of 200/ft/sec.

A controllability test of the aircraft indicated that roll and yaw axis control appeared normal while pitch control was less than normal. It was determined that further controlled flight was sufficient to execute an emergency landing back at KWAY. McGuire departure control was contacted and advised of our situation. They contacted the airport to advise that an emergency landing was forthcoming. However, we did not declare an emergency.

In flight we asked that a C172 that was flying nearby to look at our right main landing gear to see if it looked normal. They stated that it did look normal but did not comment on the damaged right side horizontal stabilizer and missing right side elevator control surface. Before attempting to land we made a low pass over KWAY and attempted to request personnel at the FBO to visually look at the plane. No one was in the office at the FBO so no one answered the radio.

We initiated a left downwind pattern to runway 08. As we started a final descent to runway 08 we noticed pitch control was very poor. When attempting to flare before runway contact pitch control become essentially non-existent as the plane slowed to touchdown speed. At the bottom of the descent the aircraft was unable to perform a flare, power was reduced to flight-idle about 5 ft above the runway. The plane made a very hard landing. Braking and reverse thrust brought the plane to a safe speed and we turned off onto a taxiway and taxied back to the ramp.

5/11/2019 N51DM Deer Strike Report

May 13, 2019

To whom it may concern,

I, Charles Robert Opperman, ATP, Certificate Number [REDACTED] on the morning of May 11, 2019 was flying right seat as a passenger with Pilot Frank Key in his Gulfstream Commander N51DM from South Jersey Regional Airport, Lumberton, NJ (VAY) to Boire Field in Nashua, NH (KASH).
