Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

LEFT HAND PORTION OF UPPER ENGINE COWLING BROKEN / DETACHED.
RIGHT HAND WINDSHIELD CRACKED.
RIGHT HAND OUTBOARD STABILATOR TIP CRACKED/DENTED.
LEFT EMPANAGE SKIN DENTED.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The flight being conducted was a VFR scheduled/commuter flight between Saipan (PGSN) and Tinian (PGWT) with 3 passengers on board. The distance between the 2 airports is 10 miles and average block time is 13 minutes. The flight taxied out for departure at 18:20 local time.

About 3 minutes after departure on essentially a right downwind from runway 7 approximately abeam with the approach threshold of the runway and at a cruising altitude of 1500 feet, the pilot and passengers reported hearing/feeling an impact followed almost immediately by the detachment of the left hand half of the upper engine cowling which struck and cracked the right hand windshield after detachment. The windshield remained intact. The pilot declared an emergency with Saipan ATC and returned to land on runway 7. After landing the pilot was asked by ATC if he could return to the terminal under his own power, the pilot confirmed he was able to, and taxied to the Saipan Commuter Terminal to disembark the passengers.

Post flight inspection of the aircraft revealed damage to the fiberglass right hand outboard tip of the horizontal stabilator consistent with impact damage from the detached portion of engine cowling. A small section of skin on the left side of the empennage between Fuselage Station 272.8 and 278 was dented and appeared to be caused by the impact to the right side of the stabilator. Further visual inspection revealed small amounts of blood on the propeller and significant traces of blood on the left wing leading edge inboard root and the vertical stabilizer leading edge.
