Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Left wing damaged and left landing gear limit broke. Prop strike. No property damage

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

This happened on Friday May 24th about 7:00 am. I was well rested and had nothing on my mind except practicing applying with water. On the first pass that morning I flew over my uncles field and pulled up hard approaching his house which has a very tall tree. After that I leveled out for 1/2 to 3/4 of a mile to regain air speed. I began my right turn and made it approximately 1/2 or more of the way around on the turn and the airplane began to buffet. Which I knew was a pending stall. So I push the stick forward to regain air speed and recover from the pending stall. When I lost about half of my height above ground I tried to pull back on the stick but the plane still buffeted. So I push the stick forward again until the plane was almost to the ground at which time I was full throttle and the main tires contacted the ground and stayed on the ground for quite some time. The plane did take flight but at that point the plane was approaching powerline/power pole and County Road. So I chose to bank left to avoid all that. And that's when the airplane lost air speed again and stalled. This is where the plane made contact again with the ground. But the left landing gear limit broke and the airplane came to a stop.

Once I got out of the plane I realized there was a tailwind after the large lift I made over the house and tree. This contributed to my slow speed and stall.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Be more aware of tailwind / wind direction and use more power when loaded. If I would have dumped the load when the stall occurred I would have recovered easily. So use the dump if stall occurs at low altitude.
