Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Prop tips bent aft and broken spinner, possible crank damage. Front and bottom cowling damage. Air filter and cover and air box damage. Wind screen broken. Window on door broken. Several cabin tubes bent. Right wing leading edge tip dented. Left wing is twisted and vortex generators scraped. Front left wing strut bent. Both fuel tanks compressed at fuel filler neck. Top of the rudder is compressed.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Training flight with student pilot and instructor in preparation for Private Pilot checkride in a Piper SuperCub departing the Cody Yellowstone Regional Airport at 0930 on Saturday May 25, 2019.

After 1.5 hr flight practicing required maneuvers, returned to airport for pattern work. On the second approach for stop-and-go landings the student was on speed but slightly low (3 of 4 red PAPI) and added enough power to stabilize the approach. The landing flare was started on time but the student closed the throttle too quickly and added up elevator quickly resulting in a low (1-2 ft) bounce, followed by forward stick. Aircraft landed smooth enough to just roll on the mains without a second bounce. Then the student over corrected for the light left x-wind with right-left-right rudder and deviated left of centerline less than 10-15 ft then back on centerline. Aircraft was slowing but tail was rising slowly.

At this point I (instructor) intervened with back stick but airflow was too slow to have effect. Inertia slowly carried the tail higher resulting in a prop strike and slow motion nose roll-over with the aircraft landing on its back straight down the centerline.

The emergency responders at KCOD brought out a fire truck, foamed the plane and runway where some fuel had leaked from the plane. A crew from the local FBO came out to help flip the plane back over and tow it to one of their hangars.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Relax on the controls and don't over fly the plane.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)
