Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Significant damage from instrument panel forward. Windscreen destroyed. Engine mount broken in two places. Propeller destroyed. Vertical fin damaged on top. Minor to no wing damage. No landing gear damage.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departed Boone County Airport, HRO, enroute to Carbondale, IL, MDH. On initial contact with MDH tower, we were cleared to enter a right downwind for runway 18L. Shortly thereafter, the tower advised a wind shift and recleared us to a three mile final to runway 36R. Reported on final and were cleared to land. Tower controller advised that the new wind was 330/08 knots, with no reported gusts. On short final, experienced a gust from the west requiring a forward slip to align with the centerline. Touchdown was on or near the centerline and aligned with runway heading. Shortly after touchdown, a wind gust from the west caused weathervaning toward the wind. During application of right rudder to correct, foot slipped completely off of the right rudder pedal. Could not relocate the rudder pedal. Aircraft was traveling toward the left edge of the runway. Attempted to use only the right heel brake to realign the aircraft with the runway. Right heel inadvertently and unintentionally depressed both brake pedals. Aircraft went onto the nose and continued until inverted with the vertical fin in the grass while much of the airplane remained on the runway. Shut off mags and fuel valves and exited the aircraft.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

After the fact, I found a photo of the rudder pedal/heel brake alignment on aircraft N45729. The left foot can be comfortably placed onto the center of the rudder pedal, with the heel resting on the floorboard, with no interference from the left heel brake pedal. The same is not true for the right rudder pedal/heel brake alignment. With my right foot centered on the right rudder pedal, the heel of my foot cannot rest on the floorboard without contacting the right heel brake pedal. I realized that during the cross country flight, I had developed a habit of keeping my right foot on only a portion of the rudder pedal so that my heel could rest on the floor. I did not make a conscious effort to recenter my right foot onto the pedal, either by pigeon toe method or keeping the heel well above the floor and heel brake pedal. Since the left foot can avoid the left brake pedal with the heel resting on the floor, it was not intuitive to automatically readjust my foot for landing. Lesson learned the hard way.
